Troubleshooting

Keyboard not able to charge :

1. To confirm the power indicator of the keyboard.
Charge the keyboard for 2 hours and turn on to see if the indicator light show normally:
Steady red light - charging status
Light off after steady red light - fully charged status
Blinking red light - low battery
2. If the power indicator not light up after plugging cable, please use another cable to confirm if it can be charged normally.

Keyboard typing delay, does not work.

1. Make sure 2.4GHz device (such as a router, microwave ovens, etc.) stay away from the receiver to avoid interference.
2. Low battery will cause delayed typing, make sure the keyboard have enough power.
3. Make sure there is no all-metal chassis which may shield the signal.
4. The computer is overloaded with tasks that make it difficult to process the signal from the receiver. Try rebooting your computer .

Connected before but failure now :

1. Delete all the Bluetooth devices paired records on your device.
2. Switch off the Bluetooth function on the device.
3. Reboot your keyboard and device.
4. Reconnect the keyboard again.

If the keyboard not able to connect, please try to resume factory setting:

Long press " Esc " with " = " key at the same time to set and follow the steps above to reconnect.

End
