

Woca Swep Mop

Woca Swep Mop has a sturdy, non-bending aluminum shaft and two sturdy handles, one fixed to the shaft and one attached to the mop head. It is easy to control how much moisture is left in the mop head, as it is twisted around the shaft. Since the Swep Mop is a looped mop, it is also possible to exert downward pressure while mopping, allowing the user to actively rub a spot with stubborn dirt.

Mop head replacement are available.
