

Conforms to
Wound Area

Tissue
Protection

Haemostatic
Action

Osmonate Calcium Alginate Dressing is a naturally derived gelling fibre dressing that assists with exudate and haemostasis management.

As the dressing gels, it conforms to contours of the wound bed, ensuring a moist wound environment is sustained. Easy removal ensures minimal disturbance to new or fragile tissue.

SOFT GELLING ABSORPTION

Creates a soft gel layer at the wound bed interface

TISSUE PROTECTION

Easily removed by irrigation leaving newly formed tissue undisturbed

HAEMOSTATIC ACTION

May assist in the control of minor bleeding

Suitable for:

Moderate to heavily exuding wounds or bleeding wounds

Treatment of superficial or deep wounds

Pressure injuries

Skin donor sites

Arterial, venous leg and diabetic ulcers

Reorder	Size	Sterility	Pcs/Unit	Units/Ctn
AWC001	5cm x 5cm	Sterile	10	10
