

TOP 5 REASONS TO CHOOSE BRIO

1

Brio traps pollutants

Brio captures fine and ultrafine particles as small as 10 nanometers

2

Brio removes viruses

Brio also removes bacteria, mold spores, dust, pollen, and smoke

3

Brio stays effective

Brio's clean airflow stays high between filter changes

4

Brio deep cleans the air

Brio cleans 540 sq ft in 20 minutes and 325 sq ft in 12 minutes

5

Brio saves time and money

Brio's high-capacity filtration and non-clogging technology lower costs, energy use, and maintenance

BETTER INDOOR AIR BY DESIGN

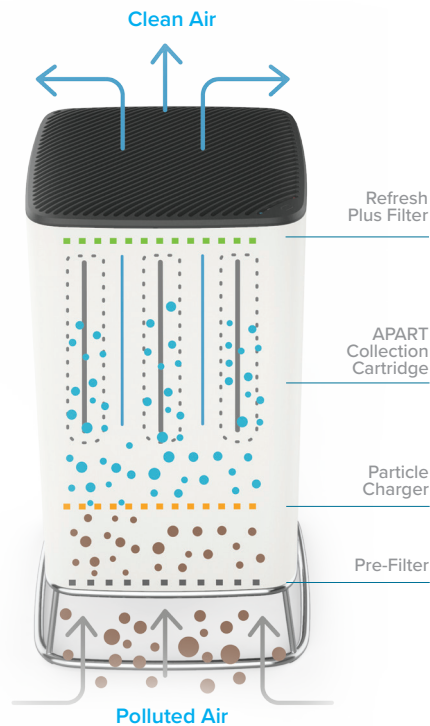

MEET BRIO

High-performance, low-maintenance air purification for home and office

HOW BRIO® DOES IT

You probably already know that an air purifier can improve your air quality, but when it comes to performance, they aren't all the same. Using patented electrostatic technology developed at the University of Washington—Brio removes fine and ultrafine particles as small as 0.01 microns without filter clogging. Brio quickly clears toxins and allergens including viruses, bacteria, wildfire smoke, mold spores, dust, auto exhaust, pet dander, pollen, gas stove emissions, and other airborne particles.

Get healthier indoor air quality with Brio.

Brio removes invisible, ultrafine particles: PM_{2.5}, PM_{1.0} and even particles as small as PM_{0.01}.

Keep clean airflow high and filter cost low with Brio

More effective than HEPA, Brio delivers a constant clean airflow without filter clogging, so performance stays high—and your air stays clean—over the entire period between filter cartridge replacements. Brio's clean air delivery rate for ultrafine particles is 50% higher than that of comparable HEPA in-room air purifiers. And, Brio's high-capacity filter cartridge can last a year or more, saving you time and money.

Brio is a great investment in your indoor air quality, and the filter savings over years of use make Brio a good value, too.

Brio is registered trademark and APART is a trademark of Agentis Air LLC ©2023

POWERFUL PERFORMANCE

Brio quickly removes:

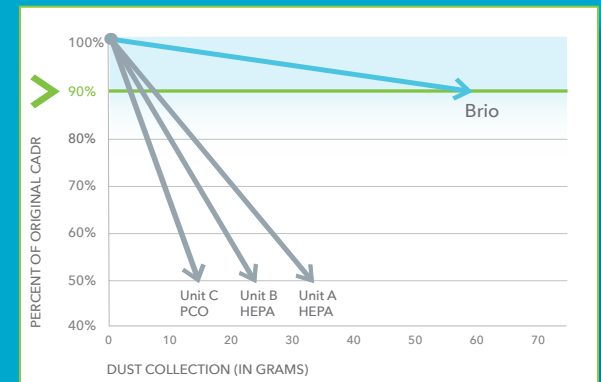

Viruses: 100% in 15 minutes

Mold: 99.9% in 20 minutes

Smoke: 99% in 22 minutes

Dust: 100% in 21 minutes

Brio does what HEPA can't

In performance tests of Brio and similarly sized HEPA air purifiers, only Brio stayed at 90 percent of its original clean air delivery rate, trapping 60 grams of fine dust—significantly more than the tested HEPA air purifiers.
