

EcoStrong™ Septic Liberator

Where to Use

- Septic Systems

Features

- Professional Liquid Concentrate.
- Opens Drain Fields.
- Bio Enzymatic Cleaning.

Benefits

- Easy to Use
- Extends System's Life
- Eliminates Malodors

Beyond Environmental

offers a full line of biologic solutions that clean and transform contaminants into water and harmless CO₂. All of our products utilize the highest quality, scientifically selected enzyme producing microorganisms and environmentally safe surfactants. We offer products and services for pet care, drain and septic management, commercial waste water treatment, industrial degreasing as well as soil remediation. At Beyond environmental our goal is to be your partner in protecting the environment for generations to come.

A backed up septic system is quite literally a home owners worst nightmare. Call your contractor and brace for the bill then call your in-laws and beg for a spare room. OR use **Eco Strong's Septic Liberator** and revive your septic system all on your own.

Eco Strong's Septic Liberator's concentrated bio enzymatic formulation naturally opens clogged and slow flowing drain fields without harsh chemicals or mechanical intervention.

Paper, fats, oils and grease and even hair are no match for the billions of hungry enzyme producing bacteria!

Available in both liquid and powder form, it is easy to use and fast acting.

On top of this, **Eco Strong's Septic Liberator** eliminates odors while working in harmony with the system's natural bacteria.

Not every septic disaster is identical, and it is important to follow the directions closely. For added piece of mind you can call us directly and we can walk you through the process and in some cases tailor the treatment to your specific situation.

For septic Maintenance use **Eco Strong's Drain Care Pro** product line.

Eco Strong's Septic Liberator is offered in our private label program. Larger container sizes are available upon request, (55 gallon drums & totes).

Challenge		Solution
Flooded Drain Field	The septic contractor says we need a new system for \$15,000.	Septic Liberator is the industries most power bio enzymatic product available and has the power to rehabilitate many failed systems. We encourage you to follow the directions closely and we are happy to speak to you about your specific situation.
Foul Odor	We are on a septic system and the sink and shower drains all stink.	Septic Liberator dramatically increases the efficiency of even an old system. A properly operating septic system is odorless.
Difficult to use Products	Many of the industrial strength products are difficult to use and complicated.	Septic Liberator Liquid has the same quantity of bacteria and enzymes as Septic Liberator Powder. The liquid does not need to be premixed, and hydrolized. Simply pour in , use as directed, and you are done. Liquids also start working faster.

Directions: Shake vigorously before using. Always treat at low flow times such as night time. The use of boiling water, anti-bacterial, or other chemical products in conjunction with Septic Liberator will negatively impact performance.

Liquid Product

Failing Systems up to 1,000 gallons: (requires 2 gallons of Septic Liberator liquid); It is strongly recommended that the tank be emptied and the lines jetted before treatment. Pour half of a gallon into a drain or toilet furthest from the tank, flush or run water for a minute. Pour another half gallon directly into the tank through the inspection/pump out port. Repeat this process in seven days with the remaining liquid.

For failing systems over 1,000 gallons double the above amounts.

Shock/tune up systems up to 1,000 gallons: (requires 2 gallons of Septic Liberator liquid) Pour half a gallon into a drain or toilet furthest from the tank, flush or run water for a minute. Pour another half gallon directly into the tank through the inspection/pump out port. Repeat this process in fourteen days.

For shock/tune up of systems over 1,000 gallons double the above amounts.

Powder Product

Failing Systems up to 1,000 gallon: Mix 5 pounds of Septic Liberator with 5 gallons of warm water, not hot. Let stand for an hour and mix often. This is very important and enables the biology to become active before being placed into the harsh septic environment. It is strongly recommended that the tank be emptied and the lines jetted before treatment. Pour half the amount into a drain or toilet furthest from the tank. Pour the other half directly into the tank through the inspection/pump out port. Repeat this process in seven days with the remaining 2.5 pounds.

For failing systems over 1,000 gallons double the above amounts.

Shock/tune up systems up to 1,000 gallons: Mix 3.75 pounds of Septic Liberator with 5 gallons of warm water, not hot. Let stand for an hour and mix often. This is very important and enables the biology to become active before being placed into the harsh septic environment. Pour half the amount into a drain or toilet furthest from the tank. Pour the other half directly into the tank through the inspection/pump out port. Repeat this process in fourteen days. For shock/tune up of systems over 1,000 gallons double the above amounts.
