	Best360 Aluminium 10CM Spacer

How to safely mount the Best360 Magnetic Camera Mount + Aluminium 10cm Spacer onto a car

1. Wipe clean the surface of the car where the Magnet will be placed. Make sure there is no dirt or debris.
2. Screw the Spacer into the Magnet. Make sure the Spacer is securely tightened.
3. Screw the 360 camera into the Spacer. Make sure the 360 camera is securely tightened.
4. Carefully lower the Magnet onto the car surface and the Magnet will attach itself. If you feel a forceful grip, then the Magnet is secure. Make sure the entire surface of the Magnet is flat on the car surface.
5. Test the Magnet strength. Try and carefully pull the Magnet from the car surface. If the Magnet pulls off too easily, then the car surface is not strong enough to hold the Magnet. If the Magnet stays in place, then the Magnet is secure.
6. Record your shot.

How to safely remove the Best360 Magnetic Camera Mount + Aluminium 10cm Spacer from a car

1. Remove the 360 camera from the Spacer.
2. Use the Spacer as a lever to carefully peel the Magnet off the car surface.
3. Unscrew the Spacer from the Magnet.
4. Store the Magnet and Spacer for safe keeping.

Best practices

The magnetic force is extremely strong. Do not store the Magnet with other personal belongings which may become adversely effected by a Magnet.

Never try to remove the Magnet from a strong magnetic surface with your bare hands. This may cause an injury. Instead, screw on the Spacer or Selfie Stick to the Magnet. Then use the Spacer or Selfie Stick to carefully peel off the Magnet from the surface.

Always test the strength of the Magnet before mounting your 360 camera. Magnetic surfaces have different magnetic strengths. Some surfaces are more “sticky” than others.

It is recommended to only use the Magnet and Spacer on smooth tarmac roads. Bumps, pot holes, and similar obstacles can adversely affect the stability and safety of the mount and 360 camera. For the best results and optimal safety, please only use the Magnet and Spacer up to the speed of 40mph.

Do not attempt to slide the Magnet across the car surface. This may damage your car surface. Do not attempt to remove the Magnet with your bare fingers. This may cause an injury.
