

NAKED SPROUT MEASUREMENTS

COSTUMER: LC Paper

STATEMENT REGARDING THE CHLORINE MEASUREMENTS FOR NAKED SPROUT:

- The sample "NAKED", a toilet roll received from LC Paper the 15th of April was analyzed to find if there were some total chlorines that justifies the usage of chlorine bleach agents.
- After testing the sample of toilet rolls for presence of chlorine bleach using the standard lab methodology, the result of the test was that the concentration of total chlorine was below 1.25 ppm.
- Below 1.25 ppm is the minimum possible outcome for this test, since the lowest detection level is 0.05 ppm (in water), but it is necessary to do a 1:25 extraction (cold water extraction: 40 g paper / 1 Liter water) to get some liquid for analyzing, therefore: $0,05 * 25 = 1,25$ so the result < 1.25 ppm, behaves as a "technical zero".
