

LC Paper

## DECLARATION OF USAGE CHEMICAL PRODUCTS

---

The current document is to declare that for the tissue paper manufacturing activities it is necessary to use the following chemical products:

- REZOSOL 4119
- CREPETROL 9730
- NOPCOMASTER
- CHEMIFLOC PA17
- SERFLOC 700ZFR
- SPECTRUM XD3899
- FENNOSIL 900 BULK

All the products in the list above respect the "REACH" environmentally friendly norm, which states that the complying products are harmless for the environment. Moreover, LC Paper ensures a proper management of the life cycle of those products according to the ISO 14.001 (environment care), making sure that the necessary checks and balances are in place to avoid accidental spillovers or other incidents.

Those products are responsible for necessary attributes of the paper, including (but not limited to) ensuring a minimum threshold of strength, a correct amount of bulk (thickness perception), a certain softness due to the correct bond between fibers and the avoidance of micro-holes.

LC Paper commits to eliminating any of the products of the list above should there be a new technique or procedure which makes it possible to produce tissue paper without such a product, or replace it with other equivalent products should there appear an alternative which has better environmental attributes.
