## Be Safe!

The information in this book has been carefully assembled to ensure that it is as accurate as possible. However, the book provides general information only, and it is sold with the understanding that the publisher and author are not rendering legal or professional services.

This book does not provide product-specific information, and you should consult the manufacturer of the product or equipment for specific information. Operation and maintenance information is provided for general understanding only.

When attempting a home repair project, always consult professionals and follow label directions. Companies that manufacture equipment and home repair products are the ultimate authorities. Follow their instructions.

Many home repair, operation, and maintenance projects involve a certain degree of risk and should be approached with care. You should only attempt repairs if you have read and understood the instructions for the product, equipment, or tool that you are using. If questions or problems arise, consult a professional or the manufacturer.

Due to the variability of local conditions, construction materials, and personal skills, neither the author nor the publisher assumes responsibility for any injuries suffered or for damages or other losses that may result from the information presented.

## Acknowledgements

Special thanks go to all the people who listen to my radio show, watch my television appearances, attend my seminars, use my home inspection service, and read my newspaper column. Your questions, answers, and tips made this book possible. Many manufacturers have provided me with excellent technical information, and I value their help.

My editor, Leah Carson, took my rough copy and made the information much more useful and user-friendly. Lynn Eckstein designed my Mr. Fix-It logo years ago. Tom Feiza III created the cover and the wonderful interior layout.

Lindsay Mefford (Feiza) created the artwork for this revised edition from our originals and my rough sketches.

Most importantly, I owe a lot to my wife, Gayle, and our kids, Lindsay and Tom. They helped me keep things in proper perspective by dragging me out of the office for vacations and family time.

Please enjoy my book and have a great fix-it day!
