LED RETROFIT STRIP KIT

CATALOG NUMBER:
NHL-LSRK-4-32W-40K-UNV

INSTALLATION STEPS

1. Shut off power to the fixture. Remove the existing fluorescent lamps and the ballast cover. Disconnect the ballast from the building's line voltage.

2. Cut the wire leads coming from the sockets and remove the sockets and socket bars on both ends of the fixture.

3. Break apart the 1-piece mounting bracket kit into 2 individual pieces. Install the brackets to each end of the fixture by bending them over the fixture to fit the exact width and fastening them to the fixture with the provided tek screws.

4. Fasten the safety cables (x2) from the retrofit pan(s) to the fixture housing using existing lances/holes of the fixture.

5. Make electrical connections for input power (via the included Power Quick Disconnect) and fixture ground. 0-10V connections optional.

6. Fasten the pans to the strip fixture with a quarter turn (provided) on each end.

7. Install the lens by gently squeezing it into the grooved edge of the pan.

8. Restore power to the fixture.
