FUNDAMENTAL PHARMACEUTICAL COMPOUNDING (16HRS)

Course Outline

This accredited 16-hour course (15 CEUs) provides two days of combined lectures and hands-on laboratory training. The overall goal of the course is to provide the pharmacist and technician with a review of the skills they will need to master in order to prepare a variety of medications their patients may need over their careers. The lectures combined with the hands-on portion is to provide the participant with a theoretical and practical basis on which to build a successful non-sterile compounding practice which complies with current requirements for good compounding practice.

This course provides didactic and hands-on experience with fundamental aspects of nonsterile compounding. Participants will learn through lecture, discussion, practice activities, and hands-on training in a fully equipped nonsterile compounding lab.

SPECIFIC COURSE LEARNING OBJECTIVES:

After completion of the course, the learner will be able to:

- Introduction to Compounding
- Lab Safety, PPE & Compounding Techniques
- Capsules / Powders
- Quality Compounding
- Liquids Suspensions / Liquid Dosage Forms
- Semisolid Dosage Forms
- Topical Dosage Forms
- Live Demonstrations on EMP, Ointment Mill, Dispensing Device

DERMATOLOGICAL COMPOUNDING WITH PAIN MANAGEMENT (16HRS)

Course Outline

The Dermatological Compounding with Pain Management course is an accredited 16 hour (15 CEUs) practice-based course designed for pharmacists, technicians, marketers, and students who want to learn more about a growing segment for compounding. Physicians and other healthcare professionals are welcome to attend. This course is a combination of didactic lectures for content and laboratory activities to enhance an already established skill of compounding. Participants choosing this course should have a solid understanding of fundamental compounding techniques and calculations. Topics covered include: compounded topical pain treatments for both acute and chronic conditions, eczema, dermatitis, psoriasis, acne vulgaris, acne rosacea, cutaneous infections (impetigo, cellulitis, candidiasis, warts), hyper-pigmentation, scars, and stretch marks. Compounding with Hazardous Products will also be covered in relation to dermatological products which use hazardous components.

SPECIFIC COURSE LEARNING OBJECTIVES:

After completion of the course, the learner will be able to:

- Discuss the etiology & clinical presentation of various skin disorders and infections, including eczema, psoriasis, dermatitis and acne
- Compare and contrast non-pharmacologic treatment modalities, including compounded options, for various skin and infections
- Recommend an appropriate treatment plan for a patient including the counseling points the pharmacist should provide for each compounded product
- Explain how the skin ages and discuss dermatological agents used in an effort combat aging
- Formulate compounded products for various skin disorders and infections
- Define pain causes and topical pain treatments
- Compare data to support or negate compounded topical pain treatments for both acute and chronic conditions
- Demonstrate skill in the preparation of compounded products for various skin disorders and infections
- Explain regulations regarding compounding, claims and product safety

IN-PERSON COURSE REGISTRATION

To register for the in-person compounding courses, please fill out the form below and send to your Xenex Labs Sales Representative. Seats are limited at 10 maximum participants per course, and each course awards 15 CEUs.
