

use this list to associate the numbers on your HD/LR to the words on your hardware/software wallet.

these standard wordlists are immutable industry standards, they never change over time. it will always be safe to recover your hardware / software wallet this way.

BIP39 SEED STANDARD

BIP39 (Bitcoin Improvement Proposal 39) is the implementation of a mnemonic sentence - a group of easy to remember words - for the generation of deterministic wallets.

A mnemonic sentence is superior for human interaction compared to the handling of raw binary or hexadecimal representations of a wallet seed.

The words in a BIP39 mnemonic sentence (or master seed) come from a fixed wordlist of 2048 words. This wordlist is created in such a way that it's enough to type the first four letters to unambiguously identify the word.

A BIP39 seed is composed of 12, 15, 18, 21 or 24 words. Most hardware and software wallets are compatible with the BIP39 standard.

There are more BIP39 seed combinations than atoms in the universe. The range would be 10⁷⁸ atoms in the known observable universe versus 2048²⁴ possible seed words combinations for a 24 words seed.
