A. Get the info from your Hodlr

Use your Hodlr & the recovery scheme sheet

- > Count the number of words and check the SOT parameters on the back of your Hodlr One. Choose the corresponding recovery scheme sheet.
- > Read and write down the 4 digits of each word in the right order, from your Hodlr(s) ONE, onto the recovery scheme sheet.
- > Convert each 4 digit number to a full BIP39/SLIP39 seed word using the appropriate wordlist. Proceed to this step manually. Doing it online to gain some time will make your seed compromised. If you don't have the list anymore, print it before proceeding.

B. Enter your seed into your software/hardware wallet

Use the recovery scheme sheet & your wallet

- > Start the recovery process on your hardware/software wallet.
- > Enter your seed into your hardware/software wallet.
- > Burn the recovery scheme sheet paper.
- > Store your Hodlr(s) ONE back in a safe place.
- > If you think one share may be compromised, it is advised to transfer all your assets to a whole new seed.
