

USE SLIP39 WORDLIST EXCLUSIVELY FOR SHAMIR BACKUP

use this list to associate the numbers on your HODLR to the words on your hardware/software wallet.

these standard wordlists are immutable industry standards, they never change over time. it will always be safe to recover your hardware / software wallet this way.

SLIP39 SEED STANDARD

SLIP39 (Satoshi Labs Improvement Proposal 39) is the implementation of a mnemonic sentence - a group of easy to remember words - for the generation of deterministic wallets.

The words in a SLIP39 mnemonic sentence (or master seed) come from a fixed wordlist of 1024 words. This wordlist is created in such a way that it's enough to type the first four letters to unambiguously identify the word.

SLIP39 implements Shamir Secret Sharing (SSS) encryption for a master seed. It splits the secret in different shares and defines a minimum number of shares required to reveal it. This number is called the threshold.

Every share is a different list of words in a specific order composed of 20 or 33 words each. They are meant to be distributed amongst different participants or separate locations. SSS master seeds can be composed of up to 16 shares.

Not all hardware wallets are compatible with the SLIP39 standard.
