

## CHILDREN'S SIZING CHART

**To determine your child's shoe size, please follow these simple steps:**

Print this page. Make sure that no adjustments are made through your printer. Use a ruler and compare to the ruler on the left of this page to determine it printed correctly.

Have your child stand on this paper with a heel just touching the dashed line.

If longest toe falls between two sizes, select the the larger size. For example the gray footprint will be a size 5.

Measure the other foot as well. If one foot is larger than the other, choose the larger size.

This is just for your reference, all shoes run differently and may vary in fit. We hope that you will find this helpful. Please call or email us with any questions you may have.

We are always happy to assist you!
