

## 2801 Series: RF Single Color LED Controller - 2 zones

2015-04-13

The **2801 Series** is a range of single color / 2 zones / RF PWM LED controller. Stylish and easy to operate, they are designed for constant voltage applications and are fully compatible with iLuxx luminaires equipped with the **Lineo Drive** technology. The system consists of a controller and receiver and both must be paired to allow communication between them.

### 2801 Controller

CLC2801K2 - Wall mount

### Compatible Receivers

CLR2501N - 4 Channels x 5A

CLR2501NS - 1 Channel x 8A

### Features

- ✓ Reliable On/Off with soft transitions
- ✓ Stable dimming from 0,1 to 100% range using PWM technology
- ✓ Wireless controller (battery operated)
- ✓ 2 zones

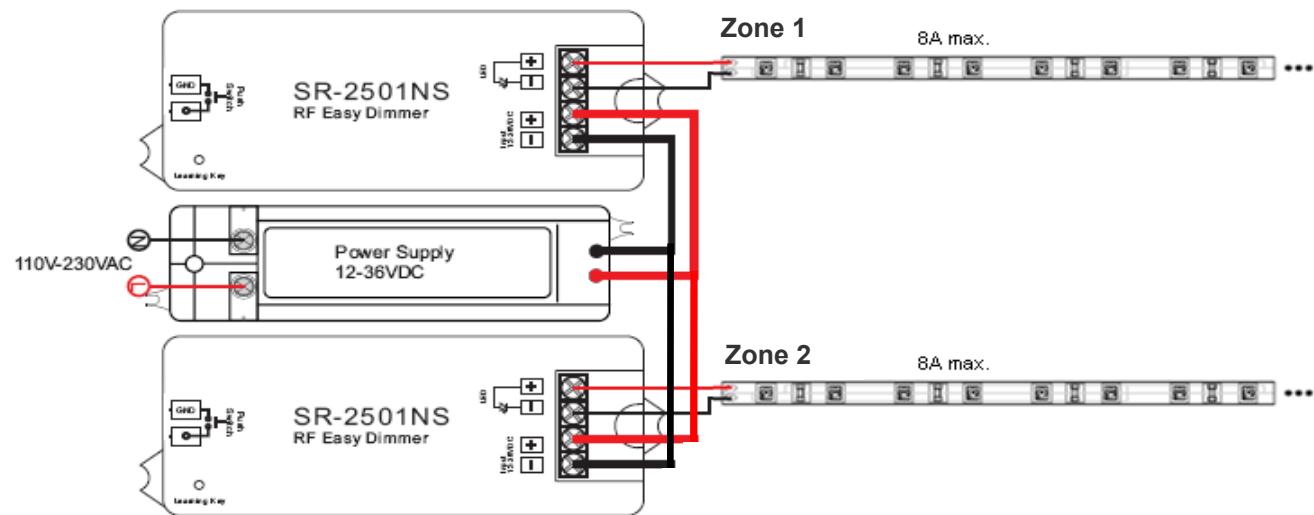

**Note:** 1 controller can control any number of receivers and 1 receiver can be controlled by a maximum of 8 controllers

The **2801 Series** uses Radio Frequencies (RF) for communication between the controller and receiver. The advantages over Infra Red (IR) devices are the wider range of operation and the fact that the signal can be transmitted through walls, doors and furniture allowing a greater flexibility of installation.

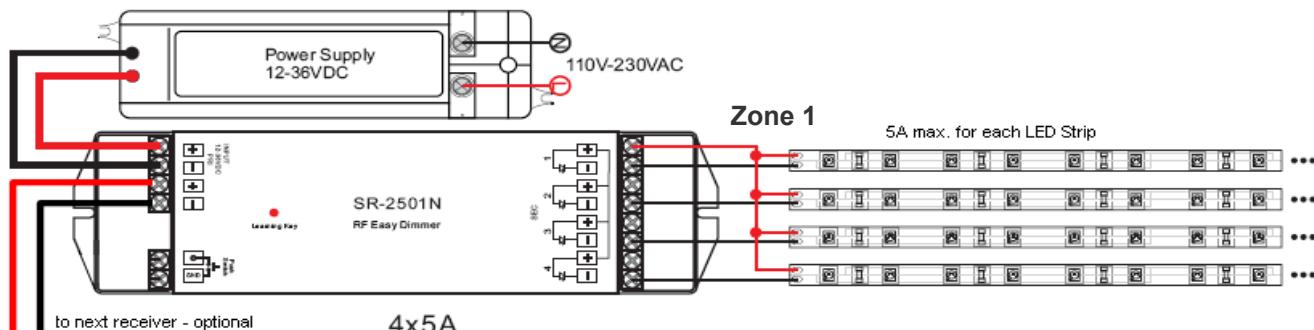

## Technical Characteristics

Controllers	CLC2801K2	
<b>Description</b>	Single color - RF - PWM - 2 zones - Wall mount	
<b>Input Voltage</b>	3V (CR2430 battery included)	
<b>Signal Range</b>	20m (65ft)	
<b>Operating Frequency</b>	434MHz / 868MHz	
<b>Color</b>	White	
<b>Operating Temperature</b>	-20°C to 55°C	
<b>Dimensions</b>	L86 x W86 x H14mm	
<b>Warranty</b>	3 years	
Receivers	CLR2501N	CLR2501NS
<b>Description</b>	4 Channels PWM Receiver	1 Channel PWM Receiver
<b>Input Voltage</b>	12 to 30 Vdc	12 to 30 Vdc
<b>Max Load Current</b>	20A (4ch x 5A)	8A (1ch x 8A)
<b>Max Output Power</b>	240W @ 12V / 480W @ 24V	96W @ 12V / 192W @ 24V
<b>Operating Temperature</b>	-20°C to 55°C	-20°C to 55°C
<b>Dimensions</b>	L178 x W46 x H18mm	L82 x W33 x H20mm
<b>Warranty</b>	3 years	3 years

## Wiring Diagrams

**CLR2501NS**

### CLC2501N

**Zone 2:** add a 2nd receiver as per previous wiring diagram

### Pairing of Receiver and Controller

1- Connect the power supply and LED lights to the receiver according to the wiring diagram.

2- Do a short press of the learning key button located on the receiver then quickly push the button you wish to use on the controller. If you use the second zone, repeat the procedure using the other button of the controller. The LED lights connected to the receiver should blink once indicating that the pairing has been successful. Make sure the controller has a battery

**Note:** Multiple receivers can be paired to one remote control and vice versa.

### To unpair

1- Do a long press of the learning key until you see the LED lights blink twice

### Controller Functions

<b>Push Button Actions:</b>	Single push of "I" Continuous push of "I"	Turns light on Increases the intensity
	Single push of "O" Continuous push of "O"	Turns light off Decreases the intensity
	Note	Retains the last settings when turned off

### Safety

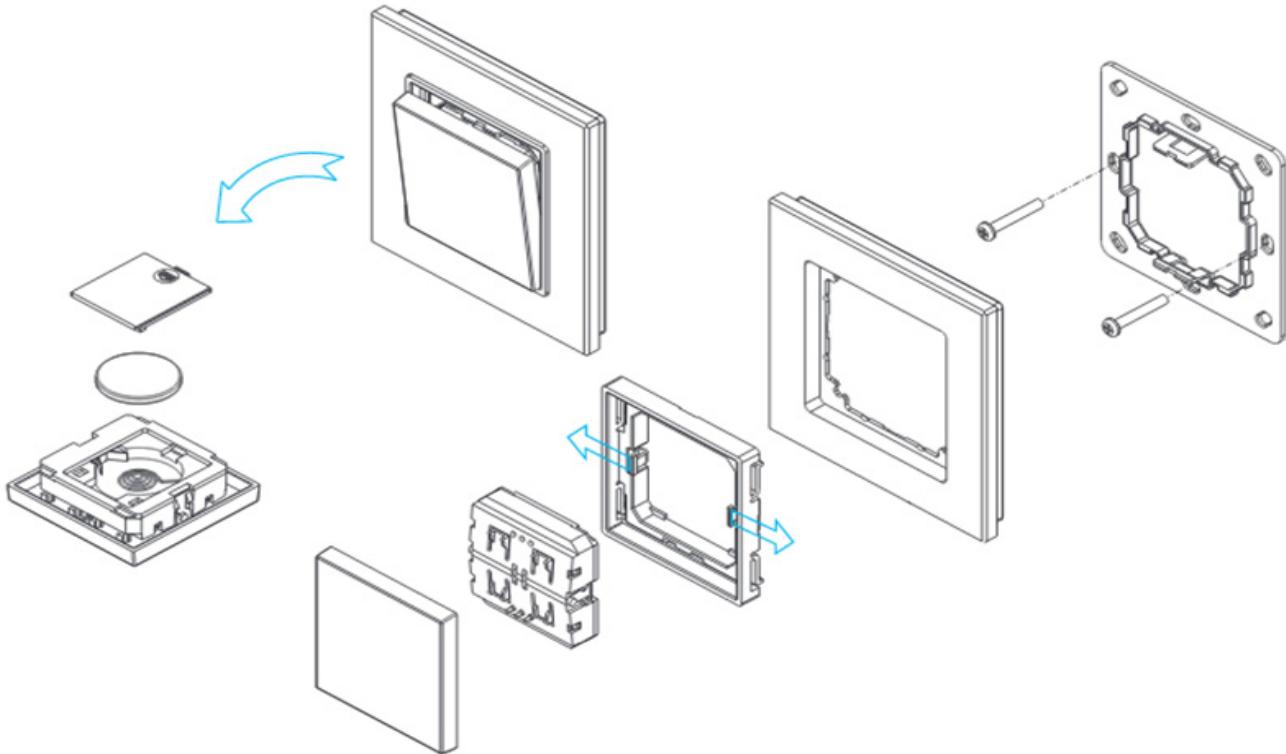

- **DO NOT** install with power applied to the receiver
- **DO NOT** expose the controller and receiver to direct or indirect moisture

## Set-Up Instructions

### Controller CLC2801K2

1- Follow illustrated steps to remove the central part of the controller to get access to the battery. Insert the 3V battery included with the controller.

2- Because the controller is wireless it can be installed anywhere on the wall. It can either be screwed directly

### Receiver

- 1- Make sure power to the receiver is disconnected
- 2- Remove the plastic covers to get access to the terminal blocs
- 3- Using a small flathead screwdriver, loosen the desired clamp screws of the terminal blocs
- 4- Insert the wires according to the wiring diagram and tighten clamp screws. Make sure the polarity is correct to prevent damage to the LEDs.
- 5- Turn power on and check if LED light is working. If no illumination, check all connections.
