FAQ's

How to setup the Smart Garden?

Scan the QR code on the box and you'll get access to the video of setting up your smart garden. You can also follow the instructions in the manual which is inside the box.

What is the best place to put it in the house?

We recommend to place the Smart Garden in a cool and well-ventilated area of your home for fast growth. Do not keep under sunlight.

How much electricity does it consume?

Smart Garden takes less than 20W, almost equivalent to a tube light.

What all Plants can I grow in the Smart Garden?

The best Varieties to grow in the smart garden are Basil, Lettuces, Swiss Chard, Parsley, Coriander, Mint and other herbs.

Why the seeds haven't germinated?

The reason for non-germination maybe due to high temperature or seed defect. Remember that they are also living beings and they also do not like high temperatures just like us. You can place fresh seeds and try again. If that also does not work, write us on support@mybageech.com

Can I grow different plants at a time?

Absolutely. Even we recommend to use different seeds (some tall plants like Basil and some bushy plants like Basil).

How To Adjust Light Timer?

There is a Timer Button on the top. You can long press that to restart the Timer.

How long does plants take to grow?

Generally, it depends on the plant, yet you can start harvesting lettuce or basil in around 3-4 weeks. To get to the full grown plant, you will have to wait a little longer.
