

KEY FEATURES

- The world's most effective electrical shark deterrent technology - scientifically proven and independently tested.
- Creates a powerful protective electrical field approx. 8m deep x 6m in diameter to protect your family and guests when swimming off your boat.
- Also suitable for use off jetties and pontoons.
- Safe for sharks and humans, with no effect on other marine life.
- Enjoy the water all day with the 8-10 hour internal rechargeable lithium battery, or power from your vessels 12V/24V.
- Easy to see LED operational status including battery life indicator.
- Technology works on most shark species, including Great White, Tiger, Bull, Whaler, Hammerhead, Mako, Oceanic Whitetip, Blacktip Reef Sharks, and more.

ELECTRICAL FIELD

OCEAN GUARDIAN®

ABOUT US

Since 2001, Ocean Guardian's Shark Shield Technology has protected tens of thousands of ocean users and prevented the unnecessary killing of marine life by environmentally destructive shark nets, drumlines, and culls.

Independently tested and verified, Ocean Guardian's Shark Shield Technology is backed by multiple peer-reviewed published research papers. Successful in deterring Great Whites, the technology is so powerful that government has approved devices for consumer rebates. Nothing is more effective.

BOAT02

JUMP IN WITHOUT A WORRY!

PROVEN SHARK PROTECTION
FOR YOUR FAMILY & GUESTS

CREATE A SHARK-FREE SWIMMING AREA!

Powered by Shark Shield Technology, the BOAT02 is an innovative long-range shark deterrent system designed to reduce the risk of a shark attack when swimming off a boat or jetty. It creates a spacious protected swimming area, so you and your guests can dive into that sparkling water without worrying about sharks.

A built-in 8-10 hour rechargeable lithium battery allows you to enjoy the water safely all day, or connect it to your vessels 12V/24V power. Up to four devices can be daisy-chained to create an even larger swimming area.

Imagine swimming off your boat with peace of mind, knowing everyone is protected by the world's most effective shark deterrent technology!

Powered by Shark Shield® Technology

Sharks have short-range electrical receptors in their snouts called the "Ampullae of Lorenzini" that are used for finding food at close range.

Independently tested and verified, Ocean Guardian's Shark Shield Technology creates a large and powerful three-dimensional protective electrical field that surrounds the device. When a shark comes within range of the electrical field, they experience unbearable muscle spasms in these sensitive receptors, causing them to turn away.

Shark Shield Technology has no effect on fish or other marine life (with the exception of rays), as they are without electrical receptors.

THE SET UP

Simply tether the BOAT02 to your vessel or jetty, turn it on, and lower it into the water where you'd like to swim. The buoy with the power module will sit on top of the water and the antenna will sit below the surface in the water column.

The BOAT02 has two electrodes positioned along a 4.4m antenna connected to an industrial strength designed power module and buoy. When the power module is turned on and the electrodes are submerged, the BOAT02 emits a large and powerful three-dimensional electrical field that deters sharks.

The BOAT02 electrical field is over 8m (26') deep and 6m (20') in diameter - quite a decent area for everyone to swim in!

DOES IT WORK ON ALL SHARK SPECIES?

Extensive independent testing has found Shark Shield Technology to be incredibly effective at deterring the shark species responsible for the vast majority of serious shark bites, including Great White, Bull, Tiger, Mako, and Oceanic Whitetip sharks.

There are some shark species that have their electrical receptors located under their snouts or have diminished receptors, and are therefore less affected by the Ocean Guardian wave form. Thankfully the species that fall into these categories are generally not considered dangerous to humans (e.g. Wobbegong, Nurse Sharks).

- A INDUSTRIAL STRENGTH DESIGNED POWER MODULE HOUSES PCB AND RECHARGEABLE LITHIUM BATTERIES
- B STRONG NYLON CAGE TO PROTECT SUBSEA GRADE CONNECTORS AND ON / OFF SWITCHES
- C DURABLE ROTO MOLDED BUOY
- D 4.4M ANTENNA WITH PROTECTIVE NYLON BRAID WITH TWO MARINE 316 STAINLESS STEEL MESH ELECTRODES
