**IMPORTANT**

Kill the power to your Step Sliders by turning off the rocker switch. You will want them to remain closed for Door Delete Installation.

**Step 1**

**DOOR DELETE INSTALLATION**

Move your front seat as far forward as it will go and remove this factory plug.

**Step 2**

Separate the plastic from the seat frame rail. Slide the Clip-On Barrel Nut over the metal and align with the factory hole. Thread piece will face the back. Replace the plastic.

### Step 3

Take the door delete bracket and place it in front of the factory hole. Secure with Phillips screw from the kit.

### Step 4

Thread the door delete harness with the spade connectors through the bracket. Connect each side to the door delete button and snap it into place. Red and black wires can be plugged in on either side of the button.

### Step 5

Remove rocker panels to expose your door sensor connectors and disconnect. Run the door delete harness along the back of your seat frame under the plastic to the B pillar. There is a split in the plastic to tuck the harness. Bring one side of the harness to the front under the plastics and thread the other to the rear on 4 door models. For 2 door models, tuck the remaining harness under plastics. Clip both connectors together, one into the sensor and one into the harness. Replace plastics and repeat on both sides.

Return power to steps with rocker switch.

**YOU ARE DONE!**
