

While single layer masks can help keep you safe during light construction or cleaning activities, they offer little protection against very small particles traveling through the air. For protection against very small particles, a mask with filtration material is often required.

Our KN95 mask conforms to the most stringent filtration standards. Our Disposable KN95 mask provides protection against non-oil-based particles such as those resulting from wildfires, PM 2.5 air pollution, volcanic eruptions, or bio aerosols. They are extremely durable, have a soft and comfortable inner surface, and an adjustable nose piece to provide proper fit.
