## THROTTLE BODY

Today, modern engines still work on the same principles as their predecessors from over 100 years ago, however in the pursuit of power and, in more recent times, efficiency and emission control, what were once simple mechanical controls have now been replaced by modern computers and electronics. Gone are carburetors, throttle linkages or cables, ignition distributors and mechanical fuel pumps. These have been replaced with fuel injection, electronic throttles, crank angle sensors and high-pressure common rail fuel delivery systems.

Since the early 2000's, new vehicles have been manufactured with electronic throttle control pedals that pass their position information to the ECU (engine control unit) in the form of small voltage changes. The ECU then processes that information before opening the throttle and controlling ignition timing and fuel injection duration to give a driver the power increase they are asking for. Although this information passes quickly from driver input to engine reaction, and is far more efficient than cables or linkages, due to the need for emission controls and a "one setting suits most" design, this can often make the engine less responsive than desired and in the case of modern diesel vehicles, can produce a delayed reaction referred to as throttle lag.

There are many ways to improve the power of modern engines. Larger turbos, cold air intakes, free flowing exhausts, ECU upgrades and remaps to name a few. But what if you could increase the pedal response and unleash the power that already lurks within your standard engine without the costs of expensive modification?

Aftermarket throttle controllers do just that and are a cost-effective performance modification that can be fitted by the home DIY mechanic in as little as 5 minutes. Although a throttle controller does not affect the peak torque and power of an engine, they are capable of shortening the throttle response time, therefore reducing throttle lag while sharpening the throttle curve, effectively unleashing the engine's power lower in the rev range.

The following pages include Ultimate9's throttle controller models, each developed and tuned for individual vehicle makes and models including applications for on and off road as well as a range of UTV vehicles.

## **evcX OVERVIEW**

The evcX sees the addition of new features and functionality, allowing users to explore their vehicle's potential even further.

Bluetooth enabled, take control of the evcX through the new Ultimate9 TC app and enjoy the larger displays offered by mobile devices, whether picking from favourite settings or choosing different modes and sensitivity levels.

Its larger OLED (Organic Light Emitting Diode) display supports comprehensive on-screen information, incorporating a self-dimming feature that activates as it senses a change in ambient lighting.

With new mounting options available and dual USB-C plug ports, the driver interface offers users greater freedom in positioning and the ability to be removed from the vehicle, leaving the throttle controller in the last selected mode.

Remove the driver interface in combination with the new Lock mode and add another layer of security. Lock Mode will disable the throttles input and offer users more comfort in their car's safety.

### **Standard features of the evcX include:**

- **Ultimate9 mode** - Highest throttle response setting
- **Ultimate mode** - 9 levels of increased throttle response
- **Anti-Slip mode** - Reduced initial response for increased traction
- **Launch mode** - increased response with a more linear profile to reduce the chance of wheel spin
- **Economy mode** - for better fuel consumption and less throttle response
- **Factory mode** - Standard factory settings
- **Valet mode** - Reduced throttle response and RPM limited
- **Adapt mode** - Adapts to user throttle input
- **Lock-out mode** - Disables user interface and locks throttle
- **Bluetooth control** - via a iOS/Android compatible phone
- **Removable user interface** - Enhanced security for lock-out mode
- **Dual USB-C plug ports** - ease of installation and integration
- **An array of mounting options**
- **Easy carry storage satchel**
- **OLED display** - Displays mode and connection/lock-out status
- **Programmable to both automatic and manual transmissions**
- **30-day money-back guarantee**
- **Limited lifetime replacement warranty**
- **Certified to CE, FCC & RCM requirements**

### **Ultimate9 Mode:**

For maximum throttle enhancement, Ultimate9 mode instantly sets the pedal response to the highest setting.

### **Ultimate Mode:**

Ultimate Mode sharpens your throttle response, the higher you go the more aggressive your throttle becomes. Also featuring 9 levels of adjustment for user refinement. Great for everyday driving, towing, overtaking, or highway driving.

### **Anti-slip Mode:**

Anti-Slip Mode offers a subdued throttle response which is perfect for driving on slippery surfaces such as snow, ice and mud, giving more control with reduced chance of wheel-spin.

### **Launch Mode:**

Launch Mode sharpens your throttle response, the higher you go the more aggressive your throttle becomes. However the initial response is slightly modified in comparison to the Ultimate mode so as to reduce the likelihood of wheel spin, therefore increasing traction.

### **Economy Mode:**

Economy Mode sharpens your throttle response, the higher you go the more aggressive your throttle becomes. However the initial response is slightly modified in comparison to the Ultimate mode so as to reduce the likelihood of wheel spin, therefore increasing traction.

## Factory Mode:

Factory mode replicates your vehicles factory/OE throttle mapping.

## Valet Mode:

Designed for parking, Valet mode reduces the throttle response whilst limiting the available throttle to provide approximately 50% RPM max.

## Adaptive Control Mode:

Adaptive Control Mode is a set and forget mode, using 9 tuning settings from Ultimate Mode to deliver the most appropriate throttle response depending on your current driving behaviour in real-time. For example, if you're in heavy traffic and only moving up 2-3 metres at a time, AC mode will select Ultimate Mode 1-2, when you start to accelerate it will increase your throttle response to Ultimate Mode 3-5, however if you see a gap in traffic and hit the go pedal all of a sudden, it will react in kind and deliver Ultimate Mode 6-9.

## Throttle Lock Mode:

Adding an extra level of security for not only the evcX but also the customer's vehicle. When Throttle Lock mode is engaged, the evcX blocks all throttle input from the accelerator pedal, the vehicle will start, however, no matter how hard you stomp on the pedal the vehicle simply will not rev, essentially disabling the vehicle and rendering it immobile. The evcX can also be removed from the vehicle altogether and stored in the provided easy-carry satchel, meaning you can place the evcX into Throttle Lock mode and remove the evcX from the vehicle, completely disabling the car's throttle.

## **EVC OVERVIEW**

Featuring 4 driving modes and 20 tuning settings, adjust your throttle response to suit your specific needs. Easily installed in under 15 minutes, the EVC is the DIY mechanic's solution to throttle lag; customisable for any driving terrain or situation, whether you're on the highway or off the beaten track.

The EVC provides new points of reference for your vehicle's throttle mapping, modifying the torque request that is sent to the throttle tables in your vehicle's Engine Control Unit (ECU). As a result, the throttle is activated faster, ultimately reducing throttle lag and enhancing throttle response.

### **Standard features of the EVC include:**

- **Ultimate mode** - 9 levels of increased throttle response
- **Economy mode** - for better fuel consumption and less throttle response
- **Automatic mode** - Adapts to throttle input
- **Factory mode** - Standard factory settings
- **Programmable to both automatic and manual transmissions**
- **30-day money-back guarantee**
- **Limited lifetime replacement warranty**

### **Options include:**

- Over 20 faceplate colours and designs
- Magnetic dash mount

### **Ultimate Mode:**

Ultimate Mode sharpens your throttle response, the higher the setting, the more aggressive your throttle becomes. Featuring 9 levels of adjustment for user refinement, Ultimate mode is great for everyday driving, towing, overtaking, or highway driving.

### **Economy Mode:**

Economy Mode subdues your throttle response below factory levels and features 9 levels of adjustment. The higher the setting, the more subdued your throttle response becomes. Great for off road, heavy traffic, or low-speed towing manoeuvres.

### **Normal Mode:**

Normal Mode replicates your vehicle's factory/OE throttle mapping.

### **Automatic Control Mode:**

Automatic Control Mode is a set and forget mode, using 9 tuning settings from Ultimate Mode to deliver the most appropriate throttle response depending on your current driving behaviour in real-time. For example, if you're in heavy traffic and only moving up 2-3 metres at a time, AC mode will select Ultimate Mode 1-2, when you start to accelerate it will increase your throttle response to Ultimate Mode 3-5, however if you see a gap in traffic and hit the go pedal all of a sudden, it will react in kind and deliver Ultimate Mode 6-9.

## CUSTOM FACEPLATES

With more than 20 custom faceplates in the the range, customers can now personalise their EVC Throttle Controller to compliment their vehicle colour or choose from a range of designs.

Our range is growing thanks to customer feedback. To help merchandise the full range of face plates, they are now individually packaged in clear plastic bags with header cards so you can hang them on shelves, gondolas, peg boards etc.

# WARRANTY

Your EVC & evcX Throttle Controllers are backed by a 30 day money back guarantee. If you are not completely satisfied with the results, please return your EVC to the place of purchase within 30 days for a full refund less original shipping costs if applicable.

iDriveNZ provides to the original purchaser, a limited lifetime replacement warranty against manufacturing faults or defects. Conditions resulting from normal wear & tear, modification, misuse, abuse or incorrect fitment are not covered and will void the warranty

In order to make a claim under this warranty, the purchaser must:

- Return the product to the place of purchase with a valid receipt/invoice or proof of purchase or contact iDriveNZ Customer Service at [sales@idrive.co.nz](mailto:sales@idrive.co.nz) or 09 448 1071.
- Provide iDriveNZ with any additional information as requested.

The purchaser is responsible for any return freight or fitting/removal costs incurred when making a claim under this warranty unless communicated otherwise by iDriveNZ. This warranty is limited to the original purchaser and is not transferable.
