Why people love this look

Also Known by different names such as Wispy effect, Feathering, Kim K, Spiked Sets or Strip Lash Look, the Textured effect has become increasingly popular over the past year. So many clients are wanting Volume lashes, but without the straight line look, which can make the set appear a little 'fake'. This is where Texture comes in, by using this unique styling method you can create the fullness of a volume set and combine it with the wispieness of a classic set - a match made in lash heaven.

The emphasis of this class is to advance students' skill sets to the elite level of Master lash artists by introducing them to the perfect line method and advanced lashing techniques using Russian volume technique.

*Please note this teaching method involves the use of 0.07 advance Russian volume (not American mega volume 0.03)
