**Fill the Planter**

**Fill the Planter**

**Next Step**

**Gentle Reminder**

1. When watering, stop once the indicator inside the gauge reaches the full position. Watering excessively past the full position may lead to oversaturation of soil and undermine plant growth.
2. The top layer of soil may be dry during the first week of planting. Irrigate normally for a week and allow time for root growth.
3. Place the product in a sheltered or covered area, as strong winds may knock over mature plants.
