Copper

Care Guide

About Copper

Copper is a versatile metal which can be used to create antiqued pieces or contrasting pieces which have a high shine and rich appearance.

Copper penannular brooches are a firm favourite which explore the traditional closure for open weave and knit fabrics while they are reminiscent of the heritage objects found across Ireland which have stood the test of time and influenced modern making.

Care Instructions

Over time the surface of copper will naturally oxidise and tarnish.

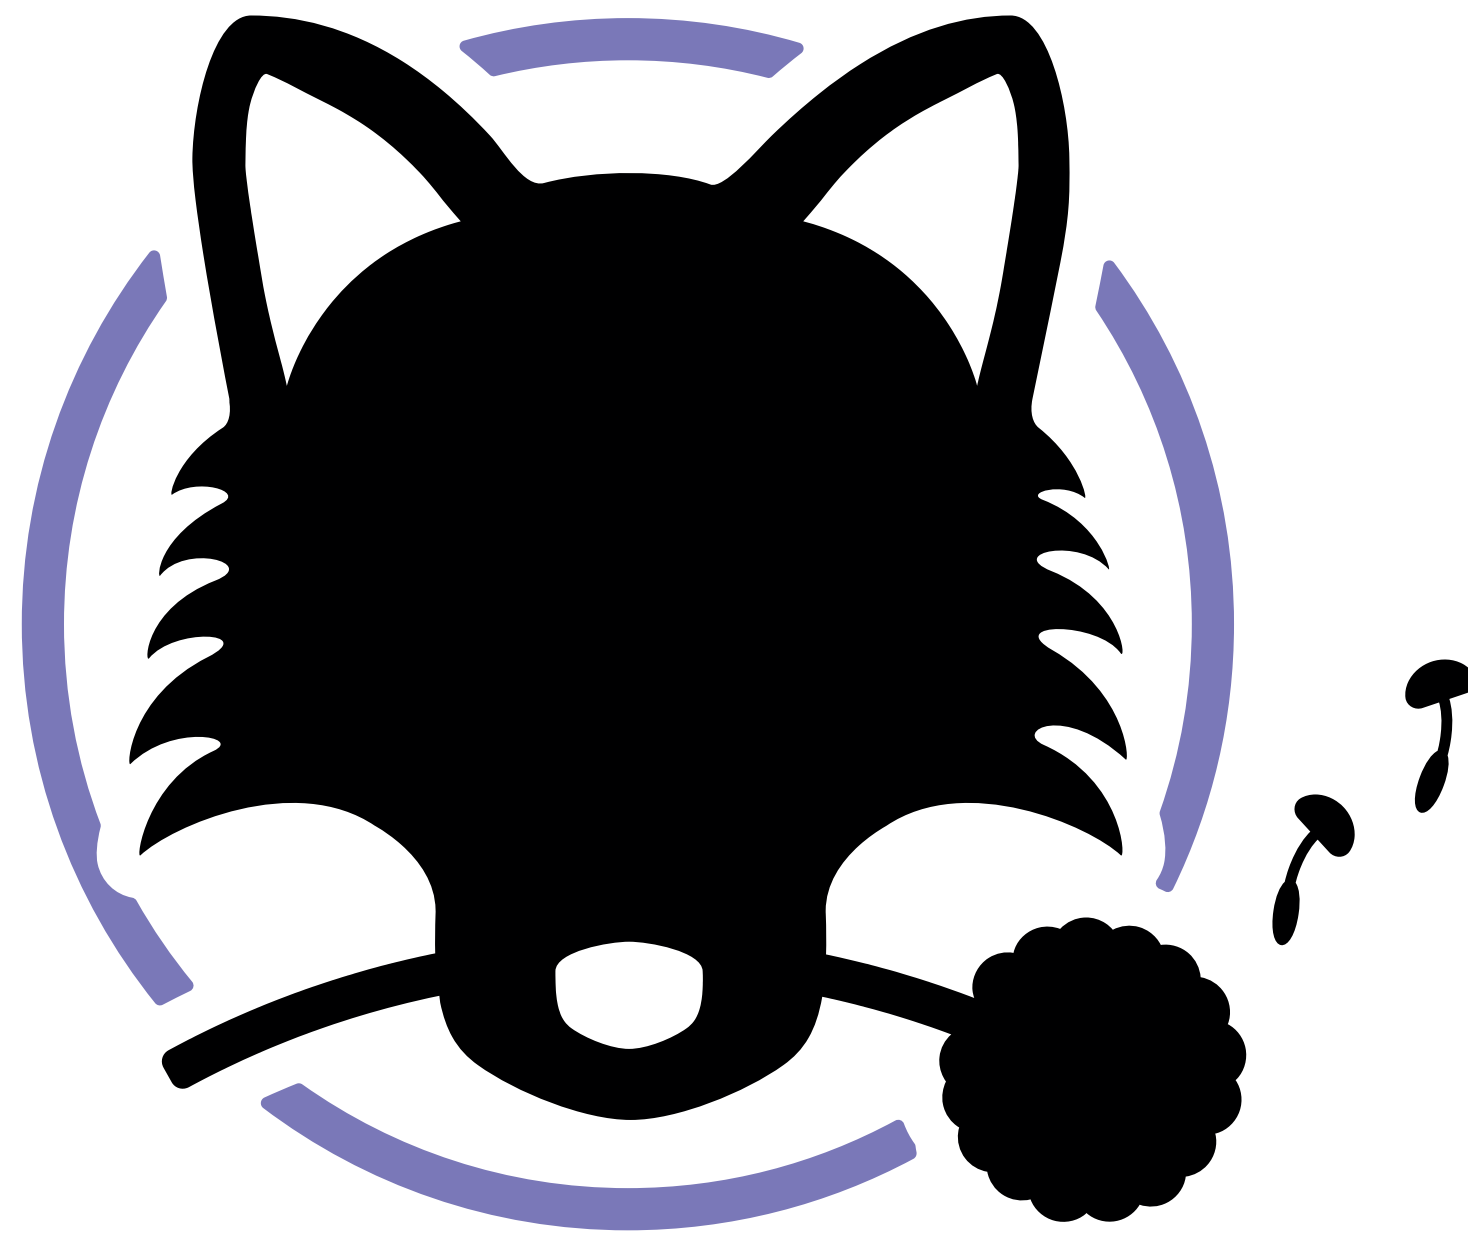

To minimise tarnish, store your piece in the box provided and in a dry environment. If you wish to remove the natural tarnish on your piece, apply metal polish (such as Brasso) with a soft cloth and rub thoroughly onto the surface.

Use a second soft clean cloth to remove any excess polish and restore the piece to a high shine.
