

# x-tourn<sup>®</sup>

Avcor created the  
X-Tourn<sup>®</sup> Latex-Free

Tourniquet Strap with patient and staff safety in mind. The exclusive latex-free compound contains no latex rubber proteins, resins or fatty acids that produce hypersensitive reactions in patients and professional health care personnel. The X-Tourn can be used with confidence and handled safely, easily and tolerated by your latex sensitive patients and hospital staff each time a procedure requires the use of a disposable tourniquet. X-Tourn's identifying blue appearance sets it apart from other tourniquets containing latex. For your convenience, Avcor tourniquets are available in different sizes and packaging configurations.

## LATEX-FREE TOURNIQUET STRAP

- Latex-free X-Tourn<sup>®</sup> contains no latex rubber proteins, resins or fatty acids providing ultimate patient safety and protection.
- The supple and smooth latex-free X-Tourn is far less abrasive to the patient's skin and delivers maximum performance and comfort.
- X-Tourn's polyisoprene material is uniform in thickness eliminating thin spots which could shred or break during application
- The X-Tourn does not curl or rope for ease of application and comfort.
- X-Tourn's talc-free synthetic material is easy to tie and remove without excess clean up.
- X-Tourn is available in 3/4" and 1" widths and in a wide variety of packaging configurations. New to the line is our **ORANGE ALERT** product, designed to ensure that the tourniquet is not left on the patient.
- Unique design features highest quality materials and innovative manufacturing techniques that provide reduction in units used and overall cost savings.

### Single Patient Use

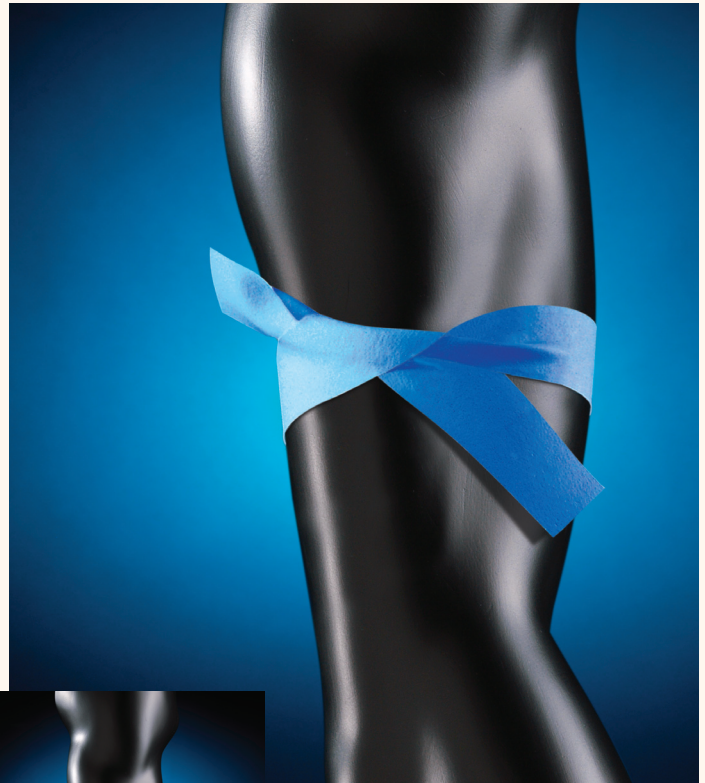

A recent study to determine the incidence of bacterial contamination on reusable tourniquets concluded that reusable tourniquets could serve as a potential reservoir for bacterial pathogens\*.

Avcor recommends the use of single-patient use tourniquets to minimize the risk of any and all bacterial contamination.

*\*Clinical Laboratory Science; Summer 2010; (Hensley, Donna M., Krauland, Kevin. J. and McGlasson, David L.)*
