

Auto Drum Tongs (DTG-AU)

Fully Automatic Drum Tongs engage and release drums without the operator having to touch the tongs or drum. Suitable for remote control, operator can locate and pick up drums from a distance. Highly reliable mechanism has only one moving part ensuring durability.

Fully automatic drum tongs offer fully automatic grip and release.

The tongs are simply lowered over the drum with the pads open.

The mechanism turns through 90 degrees releasing the pads on contact. On lifting the drum, the tong pads close and grip the chimb (lip) of the drum tightly.

When the drum is deposited the mechanism turns through a further 90 degrees, locking the pads open. The tongs can then be lifted clear.

Model Ref.	Capacity	Weight	Drum Type
DTG-AU-1	500kgs	26kgs	1 & 2
DTG-AU-HD-1	1000kgs	36kgs	1 & 2
