

Fork Fender (FBC)

The fork fender is produced from a bright colour foam and is designed to highlight the tips of the forklift forks, when fitted. This safety attachment helps to minimise accidents caused by unseen forks, as they can prevent a serious hazard to pedestrians

Fork Fenders are a low cost safety device and a must for any working area where fork trucks are present. Moving or stationary trucks with bare forks prevent a serious hazard to pedestrians. Have peace of mind knowing you have safeguarded against this danger by fitting your trucks with this product.
