

plastic delta trap

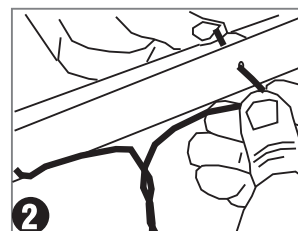

trap

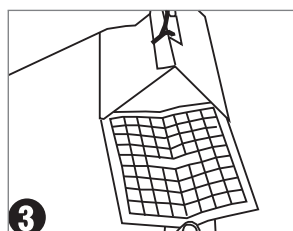

assembling the trap

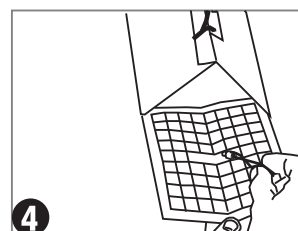

1 fold and attach at the roof by pushing the tab through the slit, making a triangle shape

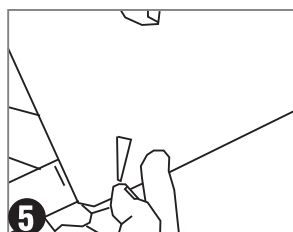

2 square off the wire and insert through holes

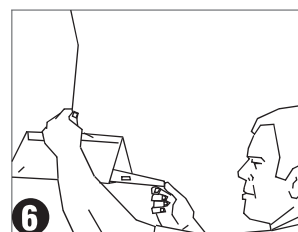

3 place the sticky liner face-up in the trap

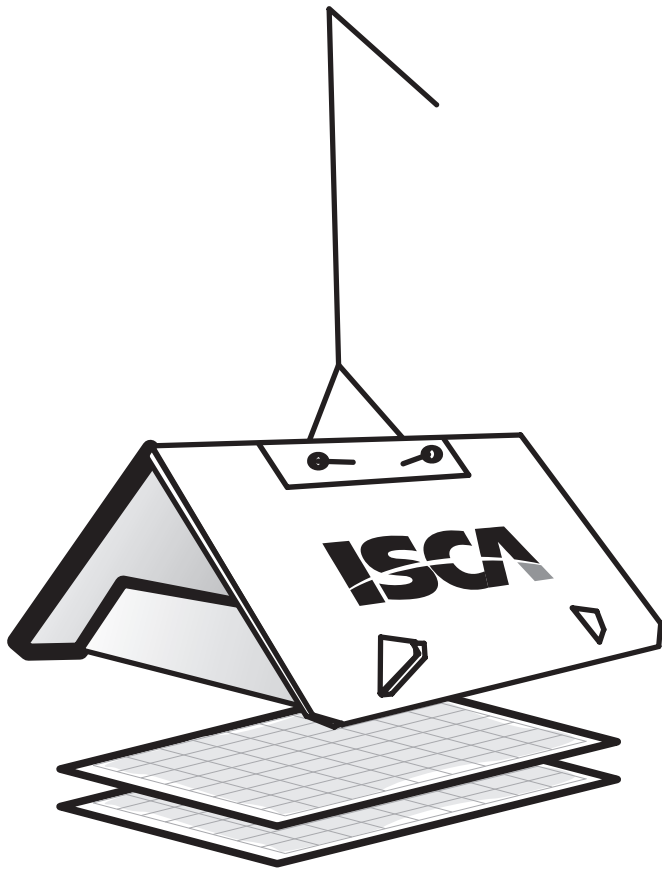

4 place lure in the center of the sticky liner, use tweezers to align correctly

5 fold the borders into the corners to encase the trap

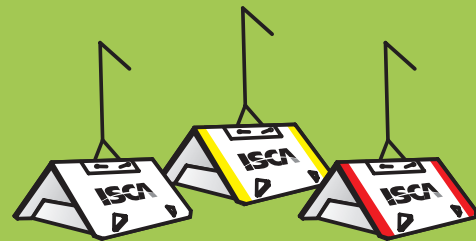

6 install the trap at the specified height or at eye level

plastic delta trap

- made with durable plastic
- plastic protects against ultra violet rays which prolongs the life of the trap
- long field life
- replaceable sticky inserts contain permanent adhesive and printed grid to aid in insect counting
- easy to assemble and manage
- use with species specific pheromone-based ISCALures to attract insects (ISCALure sold separately)
