

PAPER DELTA TRAP & ISCALURE

PRODUCT CODE: AR907 Paper Delta Trap

UPDATED: October 2011

BACKGROUND

These USDA approved delta traps are one of our most popular and dynamic trapping devices. They are cheap, easy to use, and readily assembled, allowing for rapid deployment and a quick tally of the population estimates. Glue is internal and therefore protected from dust and humidity, resulting in exceptionally long life and capture reliability. Delta traps are the trap of choice for Lepidopteran pests or other good-flyer insect pests. They can be used to monitor in orchards, large row crop plantations, small vegetable plots, indoors, etc.

ISCA's Delta Traps are typically used with ISCALure rubber septa lures. ISCALures use environmentally friendly, species specific components which are purified for optimized blends and loadings. This allows the user to trap only the targeted pest species with minimal effect on non-target, beneficial insects.

Pictures and Illustrations:

STEP 1

Pull the paper delta trap apart so that the glue inside is exposed and the base sits flat.

STEP 2

Fold corners inside along the perforations.

STEP 3

Place ISCALure on its side in the center of the sticky surface. Typically, one ISCALure is used with one delta trap.

STEP 4

Fold up the edges of the trap along the fold lines so that there is only the small opening in the center.

STEP 5

Punch out the hole at the top of the trap and thread the metal hanger through the hole. Loop it around once so that it stays in place. Bend the other end of the metal hanger into a hook and hang the trap.
