

PRESSURE

dermisplus[®]
PREVENT

HELPING TO PREVENT THE RISK OF PRESSURE DAMAGE

Dermisplus[®] Prevent redistributes peak pressures over a wider surface area, reducing the risk of pressure related tissue damage. Versatile and flexible, Dermisplus[®] Prevent can be used on intact skin, anywhere on the body.

How does it work?

Dermisplus[®] Prevent cushions and protects by redistributing peak pressures over the surface area of the pad.

It can be used anywhere on the body identified as being 'at risk', especially where there are bony prominences for example on heels, elbows and the sacrum, as well as under medical devices helping to prevent device-related pressure injuries.

Flexible and Versatile

Dermisplus[®] Prevent is flexible enough to conform to the patient's body shape and versatile enough for use in many different applications. Use the heel pads on vulnerable elbows or the sacral pad around ankles.

With Medical Devices

Pressure injuries from medical devices are common and can cause significant morbidity in patients of all ages. Use **Dermisplus[®] Prevent** underneath the device itself to help reduce the risk of device-related pressure injuries.

The Benefits of Dermisplus

Cut to size

Cut **Dermisplus[®] Prevent** to fit challenging body anatomies.

Durable

Despite being soft and conformable, **Dermisplus[®] Prevent** will remain intact for several weeks, providing a convenient, easy to use cost-effective solution.

Patient friendly

Dermisplus[®] Prevent is latex-free, non-irritating and skin friendly.

Washable

Dermisplus[®] Prevent can be washed with soap and water and re-used on the same patient.
