ENERGY AUDITS

Compressed air is one of the most important utilities for industries, accounting for 10% of the electrical consumption in the UK.

The need to generate compressed air in the most energy efficient manner is an issue of vital importance.

Savings made in your compressed air systems will have a significant impact on both your company's running costs and the environment.

EDC Air Compressors can undertake an energy survey on your compressed air system, providing a detailed report with the potential to save you up to **30 - 35%** on your compressed air running costs. This will enable you to reduce expenditure, increase efficiency, lower your carbon footprint and free up funds for future investment & growth: all just a phone call away on: **0141 812 3222**

5 YEAR WARRANTIES

Normally taken out at the same time as the air compressor is bought, and purchased in conjunction with a service contract, these warranties ensure that you have access to a qualified engineer when you need it most. A beneficial addition to your purchase, the warranty covers parts and labour only - and comes at a percentage price (normally 10%) of your air compressor purchase. Your service contract ensures your air compressor is fully serviced - either every 12 months or 2,000 hours. Keeping it fully maintained and in optimal condition- without you even having to think about it.
