Hyundai i30 Rear Reading Light LED Board install

Tools required: Flat head screwdriver, soldering iron

Step 1:

-Using a flathead screwdriver, gently lever off the clear cover from the light unit at the marked locations.

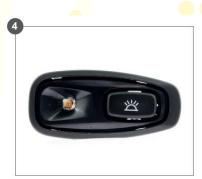

Step 2:

-The frame can be removed from the light unit as per Figure 4 & 5 to reveal the LED board.

Step 3:

-Desolder the three red marked pins shown in Figure 6. **Make note of how the board sits in the frame.**

Step 4:

-Insert the MaxLume board and re-solder at the three points. **NOTE: Circuit board must sit at an angle like the OEM board.**

-Take the lens from the OEM board and place in the holes provided on the MaxLume board over the LED chips.

Step 5:

-Insert the frame back into the light unit over the board and replace clean cover
