

# QMatic Basics

## SUPPLY LIST

**Instructor:** Libby Van Treese

**Dates:** THURSDAY, MAY 16TH | 1:30P-4:30P

**Project description:** Take a deeper dive into the functionality of your QMatic. Review all the icons and their functions. Take a look at Snap to Point and how to recover from a thread outage as well as other problems. How to use the trim command to minimize thread usage and to keep track of where you are on the quilt. Use of Connect and the three different options. Use of masking and how to fine tune it to help control the number of starts and stops. Brief coverage of the Design Library and how to keep it organized and searchable. This will be a lecture/demo style class. We will have a sample loaded on the frame so we can apply the different functions to an actual quilt while we learn how they work.

**Pattern:** Bring your **QMatic Instruction Manual**. We will use it for reference.

**Additional Supplies:** Notebook and pen to take notes.
