

# Air Compressor Fluids

## Your Ideal Solution For Performance, Protection & Fluid Life

### Applications

Compressed Air USA air compressor fluids are ideal for a broad range of applications:

- Centrifugal
- Industrial Blower
- Portable
- Reciprocating Piston
- Rotary Screw
- Rotary Vane
- Turbine

### Full Protection

Designed for virtually any application or environment, Compressed Air USA air compressor fluids protect against:

- Oxidation
- Deposit formation
- Water contamination
- Wear
- Mechanical stresses
- Extreme temperatures
- Chemical inhalation

### Unmatched air compressor fluids

Compressed Air USA compressor fluids are formulated to withstand the most punishing temperatures and pressures encountered in modern air compressors. We take into account the environments you may encounter in the field (such as extreme heat or cold), the discharge temperatures of the systems, and numerous other factors that may affect the lubrication of an air compressor. It's how we help engineer your success.

### Performance advantages

- Maximum oxidative resistance, wear protection, carbon/varnish control and more
- All products proven to excel in customers' real-world conditions, including tough environments such as:
  - » Hot and humid southeastern United States
  - » Extremely hot and arid southwestern United States
  - » Freezing cold northern Alaska, Canada and Antarctica
- Extended fluid life
- All products rated at 100% fluid life at 212°F (100°C)
- Readily separates from water to minimize rusting and viscosity dilution
- Enhanced wear protection that will not diminish fluid life or corrode components

In addition, Compressed Air USA's air compressor fluids are designed to be completely top-off compatible with their OEM and aftermarket equivalents. Therefore, no flushing or time-consuming change-out procedures are necessary to switch to a compatible Compressed Air USA fluid.
