

## 42" x 16" Full Size Ceremonial Shovel Plaque Assembly Instructions

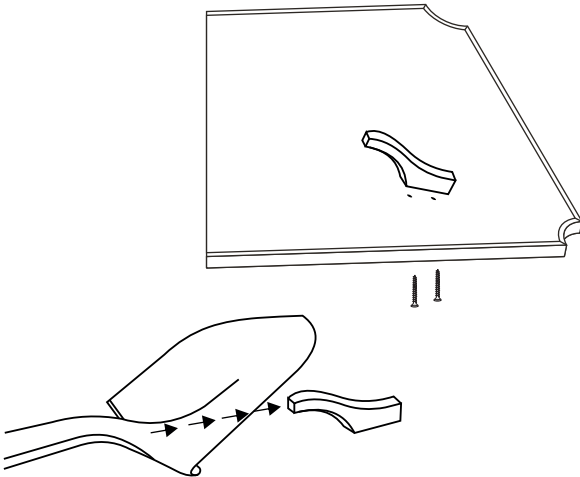

### Tools Needed

Drill Bits

9/64"

#2 Phillips Head

Position the shovel on the plaque and mark where the spade horn screws will go. Place another mark behind the center of the shovel handle and pre-drill these holes through the plaque.

### Spade Side of Plaque:

Screw the supplied screws into the spade horn from the back of the plaque.

Screw a third screw into the back of the plaque where you pre-drilled the hole for the handle.

Slide the shovel spade onto the spade horn.

### Handle Side of Plaque:

With the shovel handle positioned over the screw point, press down on the handle, creating a dimple on the back of the handle.

Remove the shovel and pre-drill a hole into the dimple. Be careful not to drill all the way through your handle.

Place the shovel back on the spade horn and secure the handle by tightening the screw through the pre-drilled hole.

Your plaque is now assembled.
