

HAMILTON STORIES

HAMILTON STORIES

Timing heroes

Since 1892

Each year opens a new exciting chapter of Hamilton's journey. For over thirteen decades, we've been infusing our pioneering vision and precision engineering into the timepieces we create. Last year, Hamilton celebrated its 130th anniversary, an important milestone that prompted us to examine our heritage through a new lens. This year, we continue to bring to the forefront our commemorative pieces along with the new state-of-the-art designs reflecting our history and philosophy.

Offering a unique vision of time, the American Classic collection encapsulates Hamilton's heritage and watchmaking virtuosity. From the epoch-making Railroad Pocket Watch and Lady Hamilton to the unconventional Jazzmaster Face-2-Face and sport-chic Jazzmaster Performer, our celebrated horological creations are reinvented for today.

At the heart of cinematic storytelling for over 90 years, we continue to celebrate the talent of extraordinary filmmakers who make the magic happen during the Hamilton Behind the Camera Awards. From backstage to the silver screen, our new Black & Gold capsule collection makes our watches stand out among the stars.

With a reputation for strong military and aviation heritage, our field and pilot watches are suited for modern-day heroes and their adventures in the great outdoors. The newest Khaki Navy Frogman line is a natural extension, offering new functionalities and design features along with a refreshed style.

Timing heroes since 1892, our watches continue to tell the stories of our landmark moments. Bringing innovative design and precision timekeeping in the field, on the big screen and in the sky, the Hamilton timepieces accompany those in pursuit of greatness.

TIME HEROES

H52414131

Space age *Is back*

Meet the newest guise of the world's first digital watch. Featuring the same retro-futuristic case design as the 1970s original, the latest member of the PSR family receives an upgrade in the form of a hybrid LCD-OLED display: Cool green numbering provides highly legible timekeeping, while a quick push of the PSR's signature button brings the screen to full brightness. Powered by a digital quartz movement and paired to a matching bracelet, this new PSR is no museum piece — 10 bar of water resistance and full stainless steel construction mean that it's ready for whatever adventures you can throw at it.

**Inspired by the
world's first digital
watch of 1970**

H52414130

Art deco

Essence squared

Celebrating the decorative aspect of art, the art deco design movement emerged during the post-World War I era, bringing ambitious optimism and exuberance to everything from architecture and interior design to jewelry and watchmaking. Hamilton watches of the 1930s reflect the linear harmony inherent to the art deco period, serving as inspiration for the later horological creations.

Featuring a 15mm x 19mm rectangular case with an intricate antique-style decor, the sophisticated watch pendant is the centerpiece of the Lady Hamilton Necklace, the epitome of art deco style. Adorned with a sunray or mother-of-pearl dial, it can be worn as part of a necklace or as a timepiece paired with a delicate chain bracelet. Three alluring versions are available to

suit your style and personal preference: stainless steel, yellow gold or rose gold PVD.

Each Lady Hamilton Necklace comes with an adjustable chain and a fringed tassel pendant in forest green, midnight blue, or red burgundy, bringing the art deco distinctive elements and color palette to the fore. All the set elements come together in special packaging inspired by the era's iconic geometric patterns.

A seamless combination of fine craftsmanship and striking appearance, the Lady Hamilton Necklace modernizes Hamilton's art deco heritage. Whether you are sipping a cocktail in a fringed dress or skating down Beachfront Avenue, sport the Lady Hamilton around your neck or your wrist.

H31241190

Riding *Through history*

Running the American railroad system was a task that required the ultimate in precision timekeeping. Hamilton's pocket watches, known for their accuracy and legibility, were up to the task — a feat commemorated in the new Railroad Pocket Watch.

Imagine a period before sophisticated digital timekeeping systems, computers, and all the complex technologies taken for granted today. This was the time of the early American railroad, a means of transportation that shaped the American dream into reality. Millions of people and uncountable sums of materiel were transported upon the railway — and timing this system was the job of Hamilton, a firm that began operations in 1892, in Lancaster, Pennsylvania.

The Railroad Pocket Watch embodies the spirit of that early horological ingenuity, a unique combination of American mass-production techniques and advanced micro-engineering. A timepiece made in celebration of Hamilton's railroad roots, it's a limited edition of 917 pieces, recalling the firm's address at 917 Columbia Avenue in Lancaster, PA.

Housed in a 50mm stainless steel case, its white, enamel-like dial echoes those of vintage railroad timepieces, with red 5-minute demarcations along a fully graduated, outer minute track; oversized Arabic numeral indices; black lacquered hands; and a small second counter at 6 o'clock for precision timekeeping.

A closed case back features a special engraving of a train and the words "130th Anniversary Railroad Special" in commemoration of the thirteen decades that have passed since the firm's founding in 1892. Inside beats a hand-wound movement, the ETA 6497, with 50 hours of power reserve, while a removable chain and leather travel pouch complete the vintage-inspired look and feel of the watch. Modern sapphire crystal with an anti-reflective coating and 5 bar of water resistance, however, make for a thoroughly modern, durable timepiece.

A distillation of 130 years of horological ingenuity, the new Railroad Pocket Watch is a reminder of how far we've come — and where we're headed next!

Epoch-making timekeepers

Reimagining time, these American Classic watches carry the legacy of Hamilton's inventiveness, bridging the past, at once full of possibilities, with the nostalgic present.

Double-faced *Excellence*

Upon its release in 2013, the Jazzmaster Face-2-Face has been considered a pioneer of the new watchmaking ground for Hamilton: the concept of a double-sided dial, essentially giving two distinct personalities to the single horological creation. Establishing itself as a combination of avant-garde and classic aesthetics, the collection welcomes the Jazzmaster Face-2-Face III, the third edition limited to 999 pieces.

Equipped with a round rotating 44mm case, the inventive Jazzmaster Face-2-Face III boasts two dials — one a time-telling face comprising chronograph functions, the other featuring measurement scales and an exhibition movement. Built within a multi-layered architecture, the main watch's dial has a complexity matching its inner mechanics. While the time is displayed on the outer ring, the three chronograph counters keep track of elapsed hours, minutes and seconds. These overlapping sub-dials are placed on the top of the exposed date wheel, forming a three-dimensional structure. Reinforcing the concept of duality, the anthracite dial elements are complemented by blue accents of the hour counter and passing through second hand.

Flipping the case over, the second dial features the tachymeter and pulsometer scales, allowing active lifestyle enthusiasts to measure speed and keep track of their pulse. Hamilton's watchmaking know-how comes into the spotlight thanks to the skeletonized dial design offering a glimpse of its H-41 automatic chronograph movement with 60 hours of power reserve.

Blending the unconventional and the classic, the Jazzmaster Face-2-Face III is paired with a patina-look brown leather

strap accentuated by blue stitching on both sides for a striking contrast and sporty feel.

Marked by complex dial aesthetic and versatile look, the Jazzmaster Face-2-Face III rewrites the rules by fitting out of the box innovation into a more traditional watch case. A true conversation starter, this dual personality timepiece is made for watch extroverts.

Empowering Style

Offering a timeless appeal and designed with the sophisticated individual in mind, the new Jazzmaster Performer line offers an array of options, all perfectly suited for both women and men: from assertive 42mm chronograph versions to edgy and refined 38mm and 34mm automatic styles.

Available within four distinctive looks, the Jazzmaster Performer Automatic Chronograph in 42mm features a design that expresses dynamism and action. Skillfully balancing cutting-edge technical performance and urban charisma, the four versions are housed in a sleek stainless steel or bold rose gold colored PVD case equipped with a fixed tachymeter bezel. The ultra-legible dial gets a sporty spin featuring three chronograph counters recalling the speedometer aesthetics. The 42mm Jazzmaster Performer Automatic Chronograph is powered by the H-31 automatic chronograph movement with a 60-hour power reserve and balance spring made from non-magnetic compensating alloy Nivachron™.

The Jazzmaster Performer 38mm and 34mm versions retain the sport-chic appearance, while offering more understated and minimalist dial options, enhanced with sunray finish or mother-of-pearl. With its H-10 automatic movement, the Jazzmaster Performer blends timekeeping precision and highly functional design.

A stylish watch built for any challenge, the Jazzmaster Performer timepieces are paired with a stainless steel bracelet or a perforated racing-style leather strap, emphasizing the dynamic essence of the collection. Water resistant to 10 bar (100m) and fitted with a screw down crown, this Jazzmaster is ready for all of life's adventures.

Sporting a wear-everywhere style, the new Jazzmaster Performer line infuses the Jazzmaster collection with performance-driven mindset. Made for those who favor function and style at once, the Jazzmaster Performer watches are resilient enough for an adventurous weekend and sophisticated enough for suit-and-tie occasions.

Shine *Bright*

Dark versus light. This is the eternally compelling theme at play in Hamilton's new Black & Gold collection, a melding of the subdued and the vibrant. Hamilton has brought together five of its most popular models — the Jazzmaster Automatic 36mm, the Jazzmaster Auto Chrono 42mm, the Pan Europ, the Ventura Chrono Quartz, and the Ventura S — and dressed their stainless steel cases in a black PVD coating with gold accents for an under-the-radar look that is at once stealthy and conspicuous.

Gold hands, indices, and minute/second tracks pop against the matte black surfaces of the watches' cases and dials,

bringing eclectic model families together beneath the same bicolor umbrella. Matte black or black-and-gold straps further reinforce the subtle color scheme, while a mix of automatic and quartz movements, and various case shapes means there's a timepiece available for every taste. A celebration of duality and the brand's decades-long ties to Hollywood, the new Black & Gold collection encapsulates watches made of light and shadow.

Winners announced

At 12th Hamilton Behind the Camera Awards

On November 5th, Hamilton once again demonstrated its commitment to honor the off-screen talent, the outstanding individuals behind movies, who play a pivotal role in making the magic happen. The 12th edition of the Hamilton Behind the Camera Awards was hosted by comedian Fortune Feimster.

Inspired by our long-standing heritage in the world of cinema, we teamed up with luxury lifestyle publication "Los Angeles Confidential" to honor the unsung heroes of every successful production — the film set crews. These behind-the-scenes talents had a unique opportunity to receive the awards from their A-list colleagues during the red carpet ceremony dedicated to the most extraordinary moviemakers of the year.

The watchmaker of filmmakers, Hamilton crafted timepieces that helped to add authenticity to war dramas, imagined the future of style in sci-fi epics and played critical roles in time-bending thrillers. Prominently featured in more than 500 movies and television shows, Hamilton timepieces appeared on the wrist of powerful superheroes, fearless adventurers and crafty heroines. The Hamilton Behind the Camera Awards embodies our passion for cinematic storytelling that has only grown since our first appearance on the silver screen in the 1932 classic "Shanghai Express."

"For decades, we've been supporting filmmakers and we celebrate their talent during the Hamilton Behind the Camera Awards."

*Vivian Stauffer,
Hamilton International CEO*

Hamilton watches featured in the Chinese Sci-fi movie “The Wandering Earth 2”

At the beginning of the Chinese New Year 2023, Hamilton continues to write an exciting chapter in the field of cinema with our exquisite watchmaking craftsmanship and adventurous spirit of exploration, joining hands with our brand ambassador and director Frant Gwo's new science fiction movie “The Wandering Earth 2.” As the exclusive watch partner of the movie, Hamilton provided dozens of watches for actors to meet filming needs.

“The Wandering Earth 2” follows the story of its predecessor “The Wandering Earth,” with the beginning of the radical group Digital Life Project, the first exposure of the moon engine and the imminent solar crisis.

The movie is directed by Hamilton brand ambassador Frant Gwo, produced by Liu Cixin, and stars Wu Jing, Li Xuejian,

Sha Yi, Ning Li, Wang Zhi and Zhu Yan Manzi, as well as a special performance by Andy Lau.

In the preparation stage of the movie, director Frant Gwo reached out to Hamilton designers to create a unique custom-made watch for his new movie.

With a regulator dial placed in a square transparent case, the custom-made watch matches perfectly this Chinese philosophy of “a round sky embracing a square Earth.” The black or white dials feature “The Wandering Earth” symbol, and present concave and convex textures representing the vast universe. The hands and crown are in red, which echoes the Chinese power exploring the vast universe in the movie. The transparent case reflects the skin of the wrist below when wearing the watch, which is the color of the earth. “Look up

at the great vast sky, and look down to earth,” strengthening the concept of “a round sky embracing a square Earth.”

In the movie “The Wandering Earth 2,” the custom-made watch shows the change of human timing methods in the last 1,000 years. Each color version will be limited to 122 pieces, in honor of “The Wandering Earth 2”'s release date on January 22, 2023, and will be available in June 2023 in China mainland only.

Inspired by the custom-made watch, the Jazzmaster Thinline special edition watch uses a lighter and simpler design with the same black or white dial and a concave and convex texture. Classic round steel case with stainless steel bracelet, equipped with an accurate quartz movement, the special edition watches are more suitable for everyday wear. The emotional connection between humans expressed in the film can be worn on the wrist.

Light up *The pulse!*

Upon its release in 1957, the Hamilton Ventura stunned the watchmaking and design worlds with its innovative electric circuit and bold case shape. Conceived by forward-thinking industrial designer Richard Arbib, the avant-garde Ventura lives on today in a special new, oversized iteration with a dial that illuminates in red.

Futuristic and inventive more than a half-century after its release, the Hamilton Ventura is a watch that signaled the future. Its use of an innovative, electric-powered movement combined with a positively science-fictionesque case shape in a timepiece that pushed the boundaries of both horology and design. When Elvis himself wore one in his 1961 film "Blue Hawaii," all bets were off — this was the watch of tomorrow!

Today, Hamilton celebrates this icon with a stealthy new iteration, the Ventura XXL Bright. Housed in a 47.6mm stainless

steel case covered in a slick, black PVD coating, it contains a special quartz movement that illuminates the dial in red with a push of the 9 o'clock button. Black hour and minute hands coated with Super-LumiNova® combine with an electric pulse motif and matching indices for a bold take on the 1950s model, whose aesthetic is reminiscent of city signage at night — a theme of neon and excitement.

Paired to a comfortable, black rubber strap and outfitted with a double, anti-reflective sapphire crystal, the Ventura XXL Bright is strong both in materials and in the statement it sends: that Hamilton remains at the cutting edge of watch design, pushing the limits of what is possible.

H24604330

A high-end *Icon*

The Hamilton Ventura isn't simply a watchmaking icon — it's a titan of industrial design. The brainchild of celebrated American designer Richard Arbib, its unconventional, angular case, electric movement and sci-fi aesthetic propelled it into the public consciousness in 1957, and cemented it there after Elvis wore one in his 1961 feature "Blue Hawaii." Powered by an electromagnetic coil, it was a technological breakthrough, bridging the older world of mechanical watchmaking with that of the quartz movement that would emerge in the 1960s.

In 2022, the Ventura returned to the fore of Hamilton's collection as a special, limited edition of 130 pieces in solid, 14K gold — just like the original model. Celebrating Hamilton's 130th anniversary, the new Ventura L is a reminder of the technical innovation and avant-garde approach, the driving forces behind the Hamilton's groundbreaking advancements. A truly collectible piece and a symbol of cutting-edge watchmaking, this special edition watch carries the legacy of the world's first electric watch and reflects our long-standing heritage, featuring a special engraving of the Hamilton's crest on its case back. Its design is as eye-catching as it is authentic and relevant today: The new Ventura L matches a subtle black dial with eye-catching yellow gold-colored hour, minute and red lacquered second hands and indices, a reliable quartz movement, and a classic black leather strap with a yellow PVD butterfly clasp. Measuring a versatile 33.1mm in diameter by just 9.38mm

tall and featuring high-end touches such as an anti-reflective sapphire crystal and 50m of water resistance, the dazzling, precious metal Ventura is poised to continue its high-tech journey into the horological future, garnering legions of new fans along the way.

FIELD HEROES

When small *Is big*

Since the momentous release of the Khaki Field Murph, the 42mm spot-on reproduction of the iconic "Interstellar" prop and one of science fiction's most famous watches, Hamilton fans have been yearning for a smaller version.

They told us exactly what they wanted: "Just make 38mm version of Murph. Many people want it." "When is the 38mm Murph coming out?" "38mm Murph PLEASE!!!" "Hamilton, are you listening?" And yes, we did!

The new Khaki Field Murph is an eagerly awaited interpretation of the "Murph"'s recognizable design. With its 38mm stainless steel case, ultra-readable black dial, beige vintage-style Super-LumiNova® finished hands and black leather strap, this new version reflects the key aesthetic codes of its predecessor.

The 38mm Khaki Field Murph is powered by the H-10 automatic movement boasting an 80-hour power reserve, visible through the exhibition case back.

"The Hamilton watch community is extremely passionate and knowledgeable about what we do," says Vivian Stauffer, Hamilton International CEO. "We recognize the importance of taking active part in conversations to connect with our fans, understand their needs and exceed their expectations. The 38mm 'Murph' exemplifies our philosophy."

The timepiece that once captivated the hearts of the Hamilton watch enthusiasts now returns in a versatile version appealing to those who are in love with smaller watches. Sometimes, good things come in small packages.

The long-awaited
Khaki Field Murph
38mm is here

Heroes in the field

The original soldier's watch, the Khaki Field Mechanical is known for its exceptional ruggedness and functionality. Reinterpreted in multiple versions, these tool watches inspire courage and strength.

Hamilton *X Syroco*

Our new Khaki Navy Scuba Syroco Special Edition takes our colorful, precise dive watch and gives it a special twist: Inspired by Syroco's innovative, wind-powered speedcraft — which aims to shatter the sailing speed record and shape the future of carbon-free maritime transportation —, it features a handsome blue dial in a motif symbolizing the target speed of 150km/h, matched with a blue and silver dive bezel. Powered by the H-10 automatic movement with 80 hours of power reserve and paired to a blue rubber strap, its unique case back engraving celebrates the partnership between Hamilton and Syroco, whose name derives from the famed, ferocious sirocco wind of the Saharan desert.

Alex Caizergues, Syroco's co-founder, CEO and pilot: "Syroco embodies innovation, boldness and excellence, values that we share with Hamilton. We are excited to support this special edition watch, which represents the accuracy and performance we are targeting with our project."

"We are proud to support disruptive innovation and pioneering projects," says Hamilton International CEO Vivian

Stauffer. "Together with Syroco, we are on a journey to make the impossible possible."

A hero underwater *And on land*

Worn by U.S. Navy underwater demolition teams or “frogmen” during WWII, the original Hamilton Frogman was made to withstand the toughest environments. Equipped with a canteen-style screw-down crown to protect the mechanism from water ingress and a highly legible dial, the Frogman watches were relied on during the most dangerous missions in the deep. Released to the public in 1951 and simultaneously debuted on the big screen in the drama “The Frogmen,” Hamilton’s Frogman carries the legacy of a dependable precision instrument.

Reinterpreted to become a modern adventure watch, the Khaki Navy Frogman Automatic pays tribute to its military roots, maintaining the strong DNA of its predecessor. The newest versions are housed in a 41mm case enhanced with a unidirectional bezel featuring raised numerals and indices for additional grip. A nod to the original Frogman’s design, the watch’s screw-down crown is protected by a robust bridge-shaped crown guard to ensure its 30 bar (300m) water resistance.

When underwater, legibility is key. The 41mm Khaki Navy Frogman Automatic features an ultra-readable black or khaki green dial with touches of Super-LumiNova® to ensure precise reading under any circumstances. The orange accents on the minute and second hands make them stand out while giving character to the dial design, along with the split Arabic numeral at 12 o’clock, recalling military aesthetics.

Just like the 46mm version, the 41mm Khaki Navy Frogman Automatic is powered by our H-10 automatic movement with an 80-hour power reserve and Nivachron™ balance spring resistant to shocks, temperature variations and magnetic fields.

Fitted with an imposing stainless steel bracelet or a wavy rubber strap evoking the moving sea surface, the timepiece combines precision engineering and intricate design.

A reliable companion for navigating any mission, the newest 41mm Khaki Navy Frogman is a tool watch engineered to be functional and wearable at once.

Swiss precision

At the service of rescue aviation

At Hamilton, we are very proud of our reputation for Swiss precision. When it comes to aviation, our years of experience serving the flying community allows us to understand the importance of accuracy in flight. Timing becomes even more critical when the pilots and navigators are saving lives. The Air-Glaciers teams will now be able to rely on our watches for their numerous rescues.

Hamilton has a long aviation heritage dating back to 1918 when the pioneering pilots of the era put their trust in the precision of its watches and navigation instruments.

This spirit certainly lives on. Today the Hamilton collection includes a line of pilot watches integrating specific aviation functions like the Khaki Aviation Converter Automatic Chronograph, or the Khaki Aviation X-Wind Automatic Chronograph.

At Hamilton, where equipping aviators with the most capable wristwatches is part of our DNA, we believe in supporting the best pilots in the world. Like us, they share a passion for extending the boundaries of what's possible in their field, and for putting precision at the heart of what they do.

"In our industry, it's all about timing. A few seconds can make a life-changing difference during a rescue mission or make a transport successful. Counting on Hamilton's expertise in precision is a true added value for our daily operations." — Bernard Vogel, CEO of Air-Glaciers.

"We are proud to partner with Air-Glaciers, one of the leading rescue teams in the world," says Vivian Stauffer, Hamilton International CEO. "Their dedication and passion are values we share and respect, and it's an honor to be by their side on their rescue missions."

With 57 years of professional experience in the field of rescue, Air-Glaciers is a major player in the Swiss Alps. Specialized and highly qualified in extreme rescues, the helicopter company also carries out the daily transport of goods and people. Their dedication pushed them to launch training courses for both professionals and the public, a way of transmitting their strong sense of altruism and know-how.

Together with Air Zermatt, the famous rescue team, we are very proud to support these real-life heroes, whose time becomes crucial during their missions. For them, reliability and precision are decisive — and Hamilton is the ultimate watch partner.
