# RECHARGEABLE WIRELESS OPTICAL RF MOUSE

User guide

X Performance

USER GUIDE

The X9 Performance X9RFATOPBAT is a 2.4GHz wireless RF optical mouse with a 800/1200/1600 DPI switch button, right and left click buttons and scroll wheel/button for precise and smooth control. The compact design makes it ideal for "on-the-go" workflow and the ambidextrous design offers maximum comfort to both left-handed and right-handed users and helps to increase productivity. The 300mAh built-in rechargeable battery will power the X9RFATOPBAT for up to 2-3 months before next charging is required. No need to buy and replace batteries anymore! The X9RFATOPBAT works with Mac, PC and Chrome OS, and doesn't require any driver.

About this guide

Scroll wheel

DPI switch (800 / 1200 / 1600) ;
Battery charging indicator LED:
solid red - charging, solid green - fully charged

To a USB charger or computer USB port

Charging cable

Installation instructions

The X9RFATOPBAT is automatically recognized by the computer and does not require a driver. Simply follow the steps below and you are ready to go!

1. Charge the mouse when needed.
2. Use your fingernail to lift and separate the top cover from the mouse, remove the USB RF receiver dongle from its compartment slot. Place the top cover back to the mouse securely.
3. Plug the USB RF receiver dongle into the USB port of your computer.
4. Switch to turn on the mouse power, you are ready to use the X9RFATOPBAT mouse.

Sync USB RF dongle with the mouse

Note: only if you have followed the Installation Instruction several times already but couldn't get the mouse to work, or if you lost the original USB RF dongle and get a new dongle from us, you can resync the dongle and the mouse with procedures below:

1, Preparation: boot up your computer, unplug the USB RF dongle from your computer first if it was plugged in.
2, Switch to turn off the mouse. Hold the mouse in your right hand and use your right fingers to keep pressing and holding down (hard enough to feel the click) both the scroll wheel button and right mouse button together while using your left hand to switch to turn on the mouse, then after 3 seconds, release your right fingers from the mouse buttons. Now the mouse enters into the sync mode(sync light flashes quickly), please note that you have 10 seconds only to finish step 3 and 4 below.
3, Immediately plug the RF dongle into a computer USB port. The dongle will start searching for a mouse to sync, (normally up to 10 seconds it will stop searching).
4, Promptly bring the mouse a few inches nearby the RF dongle, the mouse should sync with the RF dongle automatically. Test the mouse to see if it works or not.
5, If it does not work, repeat step 1 through 4.

If you wish to configure the mouse settings to your personal preferences you can do this in the settings of the operating system:

Mac OS
To configure the tracking speed, scrolling speed, double click speed and primary mouse button, go to Mouse in System Preferences.

Windows
To configure the mouse buttons, pointer, pointer options and wheel, go to Mouse in Hardware/Control Panel.
