

03 . Solved It! Sudoku

OK Puzzlers! Here's a traditional **Sudoku puzzle for you with a twist!** Instead of the numbers 1-9, you need to use the letters and exclamation mark in:

SOLVED IT!

Once solved, your answer is the contents of the **nine green shaded boxes in the middle row, in the order they appear from left to right.**

Submit this sequence as your answer.

How to solve a Sudoku:

The Sudoku grid is divided into nine blocks of 3x3 squares.

Each of the nine blocks has to contain all of the eight different letters plus the exclamation mark in SOLVED IT! within its squares.

In addition, each letter / exclamation mark can only appear once in any row, column or 3x3 block.
