Dynavin X SERIES Firmware Update Instructions – Version 3.0.5.2 Release date 5/20/21

THIS FIRMWARE VERSION IS FOR ALL X SERIES UNITS ONLY.

Please read the following instructions carefully and follow each step as directed. To check the Dynavin's current firmware version, swipe left on the main menu and select the "Info" icon. Look at the OS version.

1) To update, you will need a USB flash drive (**must be 32gb or less**) and a computer. We recommend doing a "Quick Format" (FAT32) of the USB flash drive first. If using a PC, this can be done by right clicking the USB flash drive location on your computer and selecting "Format…". FAT32 should be selected by default.

2) Go to: https://www.dropbox.com/sh/9sokgg52nvvw1sv/AADNUUr-CshRg8qkkdGIXvTja?dl=0

3) Once in Dropbox, you will download the files to your computer. There are two ways you can do this:

RECOMMENDED → 1. As individual files: Download each file individually. Select one file and click "Download". Do this for EACH file. Locate ALL 3 files and copy or drag ALL of them to the blank, formatted USB flash drive. **DO NOT PUT THE FILES IN A FOLDER.**

- OR -

2. As a compressed/ZIP file: Select ALL files at once and click "Download" to save directly to your computer first. DO NOT save directly to the USB flash drive. It will download as a ZIP file. Locate it and right click on the ZIP folder to unzip files. Select "Extract All". Copy or drag ALL 3 extracted files to the blank, formatted USB flash drive. **DO NOT PUT THE FILES IN A FOLDER.**

4) Unplug any iPods, cell phones, etc. from the Dynavin USB port. Also, remove the iGO Primo navigation card from the "NAV" slot.

5) Connect the USB flash drive to the Dynavin via the "MEDIA" USB port. Swipe left on the main menu and select the "INFO" icon. If the firmware on your USB flash drive was downloaded properly, there will be a tiny green light within the "Update Now" button on the screen. (If there is no green light, there is mostly likely something wrong with the files such as one of the 3 files is missing or they were not unzipped before loading them to the USB flash drive. You can try a different USB flash drive or reformat the USB flash drive and start over.)

6) Select "Update Now". It will install and reboot within about 3 minutes. Ensure that power is stable and do not power off or press any buttons during this process. Once it has fully restarted, you can unplug the USB flash drive. If the update gets stuck and shows no progress for more than 3 minutes, leave the USB flash drive inserted and hold down the HOME/POWER button and simultaneously push in the small "RST" reset button on the front of the unit with a paper clip. Continue to hold the HOME/POWER button until you see the Dynavin boot logo. If it doesn't resume the update after it reboots, please contact us at support@dynavinnorthamerica.com or during business hours at 559-486-4047.

7) To confirm that the update was successful, go back to the "Info" menu and check that it says **DynOS N7 Pro 3.0.5.2**
