

Product Specification

Air Cafe Height Cantilever Chair

Seat Shell

The Air Shaped Seat Shell is a one-piece soft polypropylene shell designed with an ergonomic hourglass shape, allowing for proper lumbar and high back-shoulder support. The shell is engineered for the ultimate comfort flexible back. The shell features forty-eight 3/8"-sized holes in the seat and forty 3/8"-sized holes in the back for ventilation. The seat is attached to the frame by means of six steel rivets attached to a fully welded engineering mounting bracket.

Frame

All leg tubes are 3/4"x1 1/2" elliptical 16-gauge tubular steel with 16-gauge mounting brackets. Leg tubes and mounting brackets are all to be circumferential welded to form a structurally solid, freestanding frame. Chairs are at a standard 30" seat height and have a foot rest.
