

Product Specification

Integrity Cafe Height Cantilever Chair

Seat Shell

The Integrity Ribbed Back Seat Shell is a one-piece soft polypropylene shell designed with an ergonomic hourglass shape, allowing for proper lumbar and high back-shoulder support. 13-reinforcement ribs are required to eliminate the need for any additional back support tubes or seat support brackets. The seat is attached to the frame by means of six steel rivets attached to a fully welded engineered mounting bracket. Seat shells must have a handle grip hole. Other custom colors available based on minimum volume.

Frame

All leg tubes are 3/4"x1 1/2" elliptical 16-gauge tubular steel with 16-gauge mounting brackets. Leg tubes and mounting brackets are all to be circumferential welded to form a structurally solid, freestanding frame. Chairs are at a standard 30" seat height and have a foot rest.
