

**THANKYOU FOR PURCHASING YOUR NEW GHOST RACKS®.
SOME SIMPLE INSTRUCTIONS TO HELP YOU SET UP. IT'S QUICK AND EASY.**

IT IS ADVISED TO FIX RACKS TO WALL STUDS OR INTO A SOLID BRICK/BLOCK WALL.

INCLUDED WITH YOUR GHOST RACKS® ARE STAINLESS STEEL SCREWS & ABRASIVE RESISTANT TAPE. IF YOU WISH TO PREVENT SCRATCHING APPLY THIS TO THE CURVED OPENING OF THE BRACKET THAT WRAPS AROUND THE TOP TUBE OF THE BIKE.

1. Select the wall your Ghost Racks® will display your beloved bike.
2. Position the brackets approximately 300-500mm apart. Depending on the length of top tube. (This is only a guide.) Make sure they are level or according to the angle of the top tube. If you have a bike with an angled top tube, the higher bracket will have to be positioned where the top tube meets the head tube. This will stop the bike from sliding. Mark where the screws will be located in each bracket. Once appropriate fixing points are in the wall screw the 2 brackets to the wall using the screws supplied. **DO NOT OVER TIGHTEN SCREWS.**
3. Take your beloved bike and place it in the brackets. Your bike is now displayed for you & everyone to enjoy.
