MASSAGE LOUNGER

VOICE COMMAND

The Pegasus 2 Smart is the first chair to feature our newest technology. By using the Voice Command feature, you can quickly access your chair's most used settings without using the handheld controller.

INSTRUCTIONS

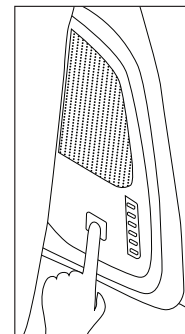

To activate Voice Command, say "Hello, Daiwa." The chair will respond and then will wait for a command. After activating, you have 15 seconds to say your command (see list below). After 15 seconds, it will deactivate and you will need to activate again with "Hello, Daiwa." Once activated, you can use more than one command, but only one at a time. After a command & reply, you can then say another command.

TIPS

- For best results, use the exact terminology in the table above and speak clearly and loudly.
- You can use Voice Command to turn on the chair, but only if the chair is plugged in and the switch on the base of the Power Box is switched to "On."

ALTERNATIVE VOICE COMMAND ACTIVATION

Alternatively, you can activate Voice Command using a touch sensor button under the left speaker. Press or swipe the square button just below the left speaker grill and you will hear the chair respond, "Hello, what can I do for you." Speak one of the commands from the list and listen for confirmation.

*Pronounced [dye wuh] **Pronounced [she-ot soo]
