

Product Data Sheet

Premium Acrylic High Gloss Enamel

SECTION A: **DESCRIPTION**

An environmentally friendly, lead-free, gloss emulsion paint for interior and exterior surfaces with excellent adhesion to previously painted enamel surfaces re-inforced with a polyurethane compound to provide remarkable scuff resistance and hardness. Suitable where a conventional solvent-based gloss enamel paint would normally be used (e.g. window frames, burglar bars, door frames, steelwork, down pipes, gutters etc). Available in white, other popular standard colours are available on request. The product can be applied on top of existing alkyd gloss enamels as long as the surface has been sanded to provide a key for adhesion. Water and steam resistant once cured fully ±14 days. Non-yellowing unlike ordinary altyd enamels. Low odour and water-based for easy cleaning of paint equipment. Has excellent stain resistance, fast drying. Contains "SILVER SHIELD" additives that kill bacteria on contact, making it perfect for kitchens or hospitals.

ACRYLIC HIGH GLOSS

SECTION B: COMPOSITION

Modified acrylic emulsion paint.

SECTION C: PHYSICAL PROPERTIES

White, Colour Card, Tint Bases Full Gloss >80% @ 60° 75 - 85 Ku @ 25°C Colour:

Appearance: Gloss: Viscosity:

1.15 - 1.21 48 - 53% 38 - 43% S.G.: Mass Solids: Volume Solids: Shelf Life: 12 Months Storage Conditions: Pack Size: Normal 14, 54, 201

SECTION D: APPLICATION PROPERTIES

Method:

Spreading Rate:

Brush, airless spray or roller 9 - 10 m²/l Two @ 35 microns (recommended) No of coats:

Hard 9hrs (depending on moisture and humidity). Allow 14 days to cure before washing. Drying Time @ 25°C:

Overcoating Time @ 25°C: Cleaning Solvent:

Recommended systems: As decribed above

SECTION E: PRECAUTION

Flash point: Toxicity: Water-based See M.S.D.S.

SECTION F: SURFACE PREPARATION

- Surfaces must be sound, clean and without moisture content before painting.

- On interior and exterior plastered surfaces previously unpainted, apply one coat SEAL-O-DAMP.
- On unpainted wood apply one coat AQUA- METALPRIME.

- On mild steel and galvanised iron prepare the surface by washing with XL DEGREASER or GALVANISD IRON CLEANER. Then apply one coat Aqua METALPRIME and two coats ACRYLIC HIGH GLOSS.

LIMITATIONS

-Cannot be applied directly onto Rhinolite or Gypsum Plaster. Use one coat of HIGH QUALITY PLASTER PRIMER and then two coats of AQUA-GLOSS.

- Product needs a minimum of 14 days to cure fully (Longer in humidity and low temperatures).

Minimum of two coats must be applied.

- Cannot be overcoated with some solvent-based products.

SECTION G:

No guarantees are implied by the recommendations contained herein; since the data sheet is issued for information only. Method of application, surface cleanliness, conditions of use etc. are beyond our control.
