

ALKANU Simple & Pure

AQUATRON

Love Your Water.
(818) 500-4090

Great tasting, alkaline drinking water filtration system by GQM-650PI 6 stage reverse osmosis and ionization. Designed to provide you with years of clean alkaline ionized water.

GQM-650 PI; ALKANU

BENEFITS OF ALKALINE WATER

The human body has a blood pH of 7.365 and it is essential to maintain this pH balance. Much of what we eat such as processed sugar, meat, dairy, and coffee, has an acidic effect on the pH balance. As a result, the body has to work overtime to restore itself to a neutral pH. Alkaline water greatly assists in the balancing process by introducing a higher pH to the body to offset the low pH establishing a natural balance. Alkaline water also significantly helps the body to absorb minerals, because of its high oxygen content. This is very important because, if the body does not have enough minerals, such as calcium, it tries to find it elsewhere and could potentially steal it from the bones in our body. This weakens the bones and can cause major problems later in life.

Filtration Process

STEP 1

5 Micron sediment filter to remove large particulates, rust, dust, dirt and mud from incoming water source.

STEP 2

5 Micron Activated coconut Carbon Block to improve the taste, and reduce chlorine and many organic compounds.

STEP 3

50 Gallons per day thin Film Membrane. It provides a reduction rate of up to 98% of TDS (total dissolved solids; particulates) bacteria, pesticides, herbicides, and heavy metals from tap water.

STEP 4

0.5 Micron Catalytic Activated Carbon Block to remove chloramine from tap water supply.

STEP 5

Alkaline filters offers premium quality alkaline water and provides far better results than ordinary calcite filters. this filter increases the pH of water up to 10 and reduces the Oxidation Reduction potential to down -300.

STEP 6

Inline final polishing made of coconut carbon filter to improve and polish the taste of drinking water, stored in the storage tank.

Oxidation Reduction Potential (ORP)

Alkaline water has extended benefits beyond increasing the pH of water. The Oxidation Reduction Potential (ORP) is the most important benefit of alkaline water. The ORP reading is an indicator of how bio-available and bio-absorbable product will be in your body. The lower the reading below 0 millivolts (mv), the more ions are available to assist with your body's metabolic functions. A very high negative ORP is desirable because it is very useful at attacking dangerous free radicals and stopping them from harming healthy cells in the body.

Reliable Warranty

5 years limited warranty on the GQM-650 PI filtration system. One year warranty on faucet and storage tank. The filtration media does not have a warranty except the membrane which has a prorated warranty of 2 years. The Warranty applies to the original owner to be operated in the original installed location within the operation parameters. For the warranty to be in force, the system needs to be serviced at least once every 9-12 months to insure the high quality drinking water.
