

I. The Clear Winner

Most speakers are engineered to stand out; the **ClearViewAudio Clio** is designed to disappear. The bulk of the Bluetooth speaker's body is composed of a 1-mm-thick wall of acrylic glass that not only blends in with any surroundings but also acts as an audio transducer, spreading waves in all directions. The result is bright, clean, room-filling sound, all from a source that doesn't need to be seen to be heard. **\$349; clearviewaudio.com**

BASS DESIRES

From a portable speaker so tough it can survive a run-in with an F-150 to a masterful modern hi-fi setup, we bring you the season's best sound systems.
