

**Bur Oak**  
*Quercus macrocarpa*  
**#10 Container**

**\$50**

*Paul Wray, Iowa State University, Bugwood.org*

*Jason Sharman, Vitalitree, Bugwood.org*

**Mature height x width:** 70' x 60'

**Light:** Full sun

**Moisture:** Dry to moist

**Soil:** Sand to clay

**Tolerates...** Alkaline soil, clay soil, occasional drought, soil compaction, brush fire

**Does not tolerate...** Full shade

**Ash replacement?** ✓

**Buckthorn replacement?** ✗

**Shoreline buffer zone?** ✗

**Seasonal interest:** Rugged architecture

**Resilience to climate change:** High adaptability

**Pollinator and wildlife value:** High

**Other notes:**

This king of the forest can be found in savannas, woodlands and the suburban home landscape alike. It is a large and stately Minnetonka native and one of the most common trees found in the region. It's environmental and wildlife benefits are insurmountable. Tolerant of compacted soils and dry conditions.
