## AESUB BLUE

- ✓ Disappearing state-of-the-art scanning spray
- ✓ Free of pigments – free of titan dioxide
- ✓ Disappearing state-of-the-art scanning spray
- ✓ No cleaning required
- ✓ Thin & homogeneous coating
- ✓ Developed & approved by scanning experts

AESUB blue is a self-vanishing scanning spray developed by scanning experts. The spray evaporates within a few hours, meaning that there is no need for cleaning after scanning. Unlike traditional sprays, AESUB blue does not contain pigments and thus avoids pigment-contamination of sensitive areas, such as

laboratories and production sites, equipment and users. You can therefore apply AESUB blue directly, on spot of scanning, without any costly transport to avoid said pigmentcontamination in sensitive areas. Overall, AESUB blue greatly increases efficiency and productivity within the digitizing processes

## How to apply AESUB blue?

  
**Layer thickness**  
~8-15 µm

  
**Effective scan time**  
1-2 h

  
**Delivery form**

## AESUB ORANGE

- ✓ Disappearing state-of-the-art scanning
- ✓ Free of pigments – free of titan dioxide
- ✓ Long-lasting
- ✓ No cleaning required
- ✓ Thin & homogeneous coating
- ✓ Developed & approved by scanning experts

AESUB orange is a long-lasting self-volatilizing scanning spray developed by scanning experts. It eliminates basic application problems of 3D metrology, especially in sensitive areas (laboratories, production, etc.) and protects the equipment from contamination by deposition of pigments. Expensive transports

of externally matted measuring objects to the sensor as well as the time-consuming cleaning of the measuring environment and objects after scanning are no longer necessary. With AESUB orange, you achieve a significant increase in efficiency and productivity in the entire digitization process.

## AESUB WHITE

Permanent state-of-the-art scaningspray

Free of titanium dioxide

Developed & approved by scanning experts

Contains pigments

Thin & homogeneous coating

AESUB white is a permanent scanning spray developed by scanning experts. It is the result of consistent further development of permanent scanning sprays. The spray applies a homogeneous, thin matting layer onto the surface of the object. It is developed for optimal contrast values in optical scanning applications. AESUB white contains pigments,

propellant and solvent and has been optimized with regards to material compatibility. AESUB white sets new standards by optimizing the surface's homogeneity and reducing layer thickness. Unlike traditional sprays, AESUB white is free of titanium dioxide, associated with cancerogenic incidents through inhalation by the European Chemicals Agency.
