

Kombucha Eye Patches

REF: 1K32

Kombucha Mask is a bio-cellulose mask manufactured by modern technology using an ancient and natural fermentation process.

The uniform layers created using a specific microorganism (SCOBY) are up to 85% thinner than conventional bio-cellulose masks (e.g. natta de coco). Serum-imbibed Kombucha Mask clings to facial contours like a second skin, allowing the serum to maintain close contact with the skin for the 20 minutes of the treatment.

Treatment with Kombucha Mask is beneficial for various skin types, depending on the choice of serum: anti-aging, whitening, or moisturizing.

Directions:

1. Open the packet and remove one Kombucha Eye Patch. Hold it between thumb and forefinger and peel off one layer of gauze.
2. Apply patch gently to the under-eye area with rounded area pointing to the outer edge of face and pointed area directly under the eye.
3. Once the patch is positioned where desired, remove the other layer of gauze and gently pat patch onto skin to engage its second skin function. This allows the serum to remain in close contact with the skin for the entire treatment.
4. Repeat with the other patch on other eye. Remaining serum in packet may be applied over the patch, or massaged into the eye area after the patch is removed.
5. Leave patch on for 20 minutes. Peel off slowly and discard.

Note: Kombucha mask is compostable.

Ingredients

Serum INCI List available on demand

Packaging

Kombucha Eye Patches are packaged between two sheets of gauze in a foil packet.

Storage

Shelf life: 36 months

Avoid: heat, sunlight, humidity
