

Bagasse

Bagasse

- Bagasse is a by-product of the sugarcane industry.
- Made from reclaimed sugarcane, bagasse uses the dry fibrous residue left once sugarcane has been pressed for juice.
- A high-heat, high-pressure process is applied to press and shape the fibres.
- 100% industrially compostable.
- Products created out of bagasse has a multitude of uses, especially for food-to-go packaging such as clamshell containers, burger boxes and chip trays.

What is PFAS

- Some bagasse products contain PFAS.
All of our products contain *no added PFAS*
- PFAS are chemicals that resist grease, oil, water and heat.
- First used in the 1940's. Used in hundreds of products including stain- and water-resistant fabrics and carpeting, cleaning products, paints, and fire-fighting foams.
- PFAS all have a carbon-fluoride bond, known as 'forever chemicals' as they are extremely persistent in our environment and bodies; can also lead to health problems.
- *No added PFAS is stated, not PFAS free*, as possible low levels of PFAS can't be controlled that are already in the environment.
